C-I-L[®] Warfarin Rat and Mouse Bait is a standard anticoagulant rodenticide which is widely used indoors and outdoors by the pest control industry.

DIRECTIONS: Place bait feeding stations in locations frequented by rats and mice, near rat holes, runways or burrows; or against walls or in corners where mice are seen. A shallow container of drinking water encourages consumption of bait. **For Rats:** Norway rats (*Rattus norvegicus*) and Roof rats (*Rattus rattus*). Place 250 - 500 g of bait at 4 - 5 m intervals. Maintain a constant supply of bait at stations for at least 10 days. **For Mice:** (*Mus musculus*). Place 250 g of bait at 4 - 5 m intervals. An uninterrupted supply of bait should be maintained for at least 15 days.

PRECAUTIONS: KEEP OUT OF REACH OF CHILDREN, PETS AND LIVESTOCK. May be harmful or fatal if swallowed or absorbed through the skin. Do not open pre-measured place packs. Rubber gloves must be worn when disposing of dead rodents, unconsumed bait and empty containers. Avoid contact with eyes, skin or clothing. Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet. Wash skin thoroughly with soap and water after handling. Wash contaminated clothing, separately from other laundry, with soap and hot water before reuse. **KEEP AWAY FROM FEED AND FOODSTUFFS.** Keep out of lakes, streams or ponds. **USE LIMITATIONS:** Bait **MUST** either be placed in tamper-resistant bait stations or in locations not accessible to children, pets or livestock. **DO NOT** place bait in areas where there is a possibility of contaminating food or surfaces that come in direct contact with food.

FIRST AID: This product contains an anticoagulant chemical which, if taken accidentally by humans, domestic animals, pets or wildlife may reduce the clotting ability of the blood and haemorrhage may result. **If in eyes,** hold eye open and rinse slowly and gently with water for 15–20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control centre or doctor for treatment advice. **If on skin or clothing,** take off contaminated clothing. Rinse skin immediately with plenty of water for 15–20 minutes. Call a poison control centre or doctor for treatment advice. **If swallowed,** call a poison control centre or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a poison control centre or doctor. Do not give anything by mouth to an unconscious person. Take container, label or product name and Pest Control Product Registration Number with you when seeking medical attention. If pet or livestock poisoning is suspected, immediately contact a veterinarian.

TOXICOLOGICAL INFORMATION: Vitamin K₁ in the form of intramuscular or subcutaneous injections, or by oral ingestion are suggested remedial treatments for anticoagulant poisoning. The severity of the case measured by establishing prolonged prothrombin times (P.T.) will determine appropriate therapy. Monitoring P.T. will indicate the necessity of repeated treatments.

STORAGE: Store in a cool, dry place away from other chemicals and food or feed. Store product not in use, in original container, in a secure location inaccessible to children and non-target animals.

DISPOSAL: Do not reuse empty container. Dispose of empty container by placing in household garbage. Dispose of dead rodents in garbage or by burying.

NOTICE TO USER: This pest control product is to be used only in accordance with the directions on the label. It is an offence under the *Pest Control Products Act* to use this product in a way that is inconsistent with the directions on the label. The user assumes the risk to persons or property that arises from any such use of this product.
