DIRECTIONS FOR USE: SHAKE WELL BEFORE USING: Lime sulphur should mainly be used as a DORMANT SPRAY to clean up overwintering insects and disease infections. During the summer further applications with lime sulphur, insecticides or fungicides are necessary to keep plants free from pests. Lime sulphur may only be mixed with Green Earth® by Wilson® Horticultural Oil Insect Spray, not with any other products. Use only with a handheld pump sprayer or backpack sprayer or as a spot treatment. Do not apply during or shortly before temperature reaches 27°C or higher. Shake spray solution while spraying. Lime sulphur stains painted wood, brick and stone. Prevent from freezing. Do not apply by air.

FRUIT TREES: As dormant spray, apply before buds break, to control blister and rust mites, scale insects, pear scales, red mite eggs, aphid eggs, twig borers, plum black knots and peach leaf curl. Mix 100 ml in 1 L of water (½ of this one litre container in 5 L of water).

APPLE AND PEAR: During summer use 15 ml (1 tbsp) per 1 L of water just before and again after blossoming to control powdery mildew, apple and pear scab; repeat 10 and 20 days after end of blossoming. Do not apply on plum in leaf and never on apricot. **The apple variety "Delicious" may be injured by summer spraying with lime sulphur.**

RASPBERRY, BLACKBERRY AND LOGANBERRY: To control rust, anthracnose, cane and spur blight, apply 100 ml in 1 L of water when buds break.

CURRENT, GOOSEBERRY: To control mildew, rust and scale insects, apply 100 ml in 1 L of water just before buds break. Apply 60 ml (4 tbsp) in 3 L of water just before blossoms open and repeat weekly after bloom until fruit colours. May be used up to 1 day before harvest.

ROSES: To control rose scales, canker and black spot make dormant application before buds break, using 100 ml in 1 L of water. For black spot and mildew during summer use 5 ml (1 tsp) in 3 L of water every one to two weeks.

TREES AND SHRUBS: As dormant spray to control scale insects on bark and needles, and also maple gall mites, use 100 ml in 1 L of water; for spruce gall aphids use 30 ml (2 tbsp) in 1 L of water before new growth starts.

COMBINATION DORMANT SPRAY: Fruit trees, roses and deciduous ornamentals. For overwintering insects, eggs, oyster shell scales, San José scales, rose scales, black scales as well as overwintering fungus disease: mix 120 ml (8 tbsp) of **Green Earth® by Wilson® Lime Sulphur Concentrate** and 60 ml (4 tbsp) of **Green Earth® by Wilson® Horticultural Oil Insect Spray** in 3 L of water.

PRECAUTIONS: KEEP OUT OF REACH OF CHILDREN. CORROSIVE to the eye. DO NOT get in eyes. Avoid contact with skin. Wear a long-sleeved shirt, long pants, chemical resistant (rubber) gloves when handling. Wash after use. Avoid staining clothing and skin.
