**PRECAUTIONS:** KEEP OUT OF REACH OF CHILDREN AND PREVENT ACCESS BY UNAUTHORIZED PERSONNEL.  
Avoid breathing spray mist or vapours.  
Avoid contact with skin, eyes and clothing.  
Do not contaminate any body of water. Do not contaminate food.  
Wear chemical resistant gloves during mixing, loading and cleanup.  
Wash hands and face before eating, drinking, smoking and using the toilet.  
Take a shower immediately after use.  
Wash protective clothing in detergent and hot water, separately from household laundry, before reuse.  
Fatal or poisonous if swallowed.  
Harmful or fatal if absorbed through the skin.  
May be fatal if inhaled.

**FIRST AID:**

IN CASE OF POISONING, CONTACT A PHYSICIAN OR A POISON CONTROL CENTRE IMMEDIATELY.

**EYE CONTACT:** Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control centre or doctor for treatment advice.

**SKIN CONTACT:** Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control centre or doctor for treatment advice.

**INGESTION:** Call a poison control centre or doctor **immediately** for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a poison control centre or doctor. Do not give anything by mouth to an unconscious person.

Take container, label, or product name and Pest Control Product Registration Number with you when seeking medical attention.

**TOXICOLOGICAL INFORMATION:** Oxamyl is a carbamate which is a cholinesterase inhibitor. Typical symptoms of overexposure to cholinesterase inhibitors include malaise, muscle weakness, dizziness and sweating. Headache, salivation, nausea, vomiting, abdominal pain and diarrhea are often prominent. A life-threatening poisoning is signified by loss of consciousness, incontinence, convulsions and respiratory depression with a secondary cardiovascular component. Treat symptomatically. If exposed, plasma and red blood cell cholinesterase tests may indicate degree of exposure (baseline data are useful). However, if a blood sample is taken several hours after exposure, it is unlikely that blood cholinesterase activities will be depressed, due to rapid reactivation of cholinesterase. Atropine, only by injection, is the preferable antidote. Do not use pralidoxime. In cases of severe acute poisoning, use antidotes immediately after establishing an open airway and respiration. With oral exposure, the decision of whether to induce vomiting or not should be made by an attending physician.

**DIRECTIONS FOR USE:**

To be used only in the manufacture of a pesticide which is registered under the *PEST CONTROL PRODUCTS ACT*.

**STORAGE:**

2023-6504  
2023-12-18
