POTATO SPROUT INHIBITOR

PRECAUTIONS

KEEP OUT OF REACH OF CHILDREN. Harmful if swallowed. Do not take internally. Avoid breathing vapour and mist. Protect eyes and mouth when working in a confined space. Only to be used by trained applicators under the supervision of AG-SERVICES INC.

If this pest control product is to be used on a commodity that may be exported to the U.S. and you require information on acceptable residue levels in the U. S., visit CropLife Canada's website at www.CropLife.ca.

PROTECTIVE CLOTHING AND EQUIPMENT:

Personal Protective Equipment:

For mixing and loading, wear cotton coveralls and chemical-resistant gloves.

For all re-entry tasks (including cleaning) prior to the completion of ventilation, wear chemical-resistant coveralls over a long-sleeved shirt and pants, chemical-resistant gloves and self-contained breathing apparatus.

For cleaning following ventilation, wear chemical-resistant coveralls over a long-sleeved shirt and pants, chemical-resistant gloves and a suitable respirator.

For tasks other than cleaning following ventilation, wear cotton coveralls and chemical-resistant gloves.

RESTRICTED-ENTRY INTERVAL (REI):

Do not allow into treated areas (to attend to fans, etc.) until after two (2) hours of mechanical ventilation (fans should circulate outside air) or four (4) hours passive ventilation (windows, vents and doors should be opened). If visible aerosol remains after these periods, do not enter until the aerosol has settled.

All operating equipment (fans) should be cleaned after the treatment and before putting into continuous use.

Hot gas generator units should NOT be situated, such that, the hot gas outlet is directed towards wooden walls, partitions or other inflammable materials when applying the inhibitor.

Seed stored in buildings which are treated with AG-SERVICES 750 A Potato Sprout Inhibitor can be damaged by contact with the fog particles or the vapours within the storage building.

DO NOT BRING SEED INTO A STORAGE which has been treated until four to six months have passed and the building has been cleaned, disinfected and continuously aired for that period. If seed is stored after these conditions have been met, do not seal the storage or apply heat, but keep well aired and at as low a temperature as possible during the period seed is stored there.

DIRECTIONS FOR USE: AG-SERVICES 750 A Potato Sprout Inhibitor is for use to treat potatoes stored in permanent type storage, equipped with internal recirculating fans suitably sized to aerate the potatoes in bulk bins or boxes.

AG-SERVICES 750 A Potato Sprout Inhibitor is applied by fogging-type applicators which heat the liquid in a hot gas steam to the vapour state and then allow the issuing vapours to cool to a fine mist of particles. Units such as the Swingfog are typical of this type of applicator. This equipment should be used as directed by the manufacturer. The application rate for AGSERVICES 750 A Potato Sprout Inhibitor should be average for the machine.

Potatoes to be treated with AG-SERVICES 750 A Potato Sprout Inhibitor should be clean, with no surface water on them. The potato piles should be free of dirt that will prevent the free circulation of the fog laden air.

APPLICATION: AG-SERVICES 750 A Potato Sprout Inhibitor can be applied at any time after the potatoes are stored. Because AG-SERVICES 750 A Potato Sprout Inhibitor can inhibit wound healing, it is preferable to delay the application for at least two weeks or longer to allow the wounds to heal and the skins to mature.

RATE OF APPLICATION:

Apply AG-SERVICES 750 A Potato Sprout Inhibitor at the rates shown/100 tonne potatoes.

SHORT TERM STORAGE: (up to 3 months) Apply 2.0 to 2.7 litres (1.5 to 2 kg of active chemical)

LONG TERM STORAGE: (4 to 6 months) Apply 4.0 to 5.0 litres of AG-SERVICES 750 A Potato Sprout Inhibitor (3.0 to 3.75 kg of active chemical) per application.

Depending on factors occurring in the storage, it may be found necessary to repeat a treatment to achieve the desired results. The operation of every storage is different and introduces different operating conditions, which in turn determine the effect of the treatment.

AG-SERVICES 750 A Potato Sprout Inhibitor is a liquid at normal temperatures. If the containers have been subjected to cold weather, heat by placing in hot water until the mixture becomes fluid. During the application AG-SERVICES 750 A Potato Sprout Inhibitor can be heated to about 50°C to facilitate flow through the application equipment.

STORAGE CONDITIONS:

Recirculating air volume - it is suggested that the volume of air be equal to 0.5 to 0.6 cubic metre per tonne of potatoes stored. All exhaust fans should be stopped and the openings sealed before the treatment is started. Inside circulating fan systems should be operating during the treatment. These fans can be left on after treatment, or closed down after a four hour period. Allow at least 12 hours to pass before outside ventilation is started.

FIRST AID:

If on skin or clothing - Take off contaminated clothing. Rinse skin immediately with plenty of water for 15–20 minutes. Call a poison control centre or doctor for treatment advice. If in eyes - Hold eye open and rinse slowly and gently with water for 15–20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control centre or doctor for treatment advice. If swallowed - Call a poison control centre or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a poison control centre or doctor. Do not give anything by mouth to an unconscious person.

Take container, label or product name and Pest control Product Registration Number with you when seeking medical attention.

TOXICOLOGICAL INFORMATION:

Low general toxicity to fish and wildlife. Overexposure to chlorpropham may result in methemoglobinemia.

GENERAL INFORMATION:

Avoid contamination of foodstuffs, feed, fertilizers, seeds, plants and pesticides. Store in original closed containers in a dry, warm location.

NOTICE TO USER:

This pest control product is to be used only in accordance with the directions on the label. It is an offence under the Pest Control Products Act to use this product in a way that is inconsistent with the directions on the label. The user assumes the risk to persons or property that arises from any such use of this product.

DISPOSAL

1. Triple or pressure rinse the empty container. Add the rinsings to the spray mixture in the tank.
2. Follow provincial instructions for any required additional cleaning of the container prior to disposal.
3. Make the empty container unsuitable for further use.
4. Dispose of the container in accordance with provincial requirements.
5. For information on the disposal of unused, unwanted product, contact the Manufacturer or the provincial regulatory agency. Contact the manufacturer and provincial regulatory agency in case of a spill, and for clean-up of spills.
