DIRECTIONS FOR USE:

Reppers Outdoor Repellent for Cats and Dogs may be used as an aid to deter cats and dogs from defecating in or on gardens, lawns, shrubs and trees. This product must be applied in the plastic mushroom-shaped evaporator(s) provided in the complete kit. The evaporator is designed to prolong the effectiveness of the product giving protection from rain, light and excessive humidity. **RETAIN PACKAGING INFORMATION FOR FUTURE REFERENCE.**

Do not use this product indoors. Do not broadcast Reppers Outdoor Repellent for Cats and Dogs or place this product unprotected in the area to be treated. Do not apply this product directly to pets. Use only in areas adjacent to buildings. Do not apply in wildlife habitat areas (e.g., parklands, forested lands).

FILLING EVAPORATOR: Unscrew the mushroom-shaped lid from the perforated chamber. Hold or stand base in a point-down position, so that the top opening of the perforated chamber faces up. Use a funnel to load repellent grains into the chamber until it is completely filled. Screw the lid back onto the base.

PLACING EVAPORATORS: Push tapered lower portion of the evaporator all the way into the ground near plants to be protected. The evaporator should be water resistant if properly filled and installed. When treating an area, use more than one evaporator. Depending on the density of plant growth, space evaporators no more than 2 metres apart. New plantings where pets have not established an urination or defecation routine will be easiest to protect. Place evaporators closer together in areas where dogs or cats habitually urinate or defecate.

Temperature and humidity may affect how long the product remains effective. Empty and refill applicators with fresh product if effectiveness decreases over time, normally every 2-4 weeks. The product will be less effective at temperatures around and below freezing. Efficacy of this product against cats may be reduced by the presence of attractions such as fish ponds, bird nests, exposed food or plants such as catnip in the treated area. Remove as many such attractions as possible. This product will not keep a cat out of its own territory.

PRECAUTIONS: KEEP OUT OF THE REACH OF CHILDREN. Causes moderate eye and skin irritation. Avoid contact with eyes, skin or clothing. **Wear rubber gloves when filling, placing and/or disposing of the evaporator.** Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet. Do not apply this product in a way that it will contact any person or pet, either directly or through drift. Do not apply to food/feed crops or animals.

FIRST AID: If on skin or clothing: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15–20 minutes. Call a poison control centre or doctor for treatment advice. If in eyes: Hold eye open and rinse slowly and gently with water for 15–20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control centre or doctor for treatment advice. Take container, label or product name and Pest Control Product Registration Number with you when seeking medical attention.

TOXICOLOGICAL INFORMATION: Treat symptomatically.

STORAGE: Store unused repellent material only at room temperatures, sealed in original container, in a dry place out of reach of children and pets.

DISPOSAL: Do not reuse empty pouch or carton. Rinse thoroughly, securely wrap in newspaper and dispose of it with household garbage.

ENVIRONMENTAL HAZARDS: Do not apply directly to aquatic habitats (such as lakes, rivers, sloughs, ponds, coulees, prairie potholes, creeks, marshes, streams, reservoirs or

wetlands) or estuarine / marine habitats. DO NOT contaminate water by cleaning equipment or disposing of wastes.
