Some settling may occur

LAST CRAWL™ Home and Garden Insect Control is composed of fossilized microscopic diatoms also known as silicon dioxide, which is effective in killing listed household and garden pests. LAST CRAWL™ acts by lacerating the exoskeleton of insects that come in contact with the product, causing dehydration, resulting in the death of the insect. LAST CRAWL™ is not harmful to humans, animals or food when label directions are followed.

DIRECTIONS FOR USE:

LAST CRAWL™ kills Ants, Bedbugs, Silverfish, Flour Beetles, Fleas, Cockroaches, Slugs, Earwigs, Centipedes, Millipedes, Sowbugs, Pillbugs, Carpet Beetles, Spiders, Crickets, Colorado Potato Beetles and Caterpillars.

LAST CRAWL™ can be mixed with an attractant such as a cereal or nut powder, icing sugar, powdered soup mixes, powdered yeast, or other dry, powdered, food-grade attractants to attract and encourage insects such as ants, cockroaches, flour beetles, earwigs, and carpet beetles to ingest it resulting in a lacerated digestive tract, causing further dehydration. The attractant can be mixed at a rate of 25% to 50% in volume.

INDOOR USE: Apply LAST CRAWL™ at a rate of 70 g product per 10 m². If applied with an attractant, the application rate can be reduced to 60 g product per 10 m². Clear away debris and lightly dust all surfaces behind appliances, cabinets, along baseboards, along edges and underneath carpets and rugs, bed frames, with careful attention given to cracks, crevices and other places where insects hide or crawl. A fine dust of LAST CRAWL™ may be applied by using hand dusters or other suitable means. For best results the treated area should be left undisturbed for two to three days to eliminate existing and reoccurring infestations.

FLEAS: Thoroughly dust sleeping quarters of pets and surrounding cracks, crevices, carpeting and baseboards. Repeat treatment as necessary.

CARPET BEETLES: Thoroughly dust underneath and along edges of carpeting and rugs.

BEDBUGS: Disassemble beds and dust frames, joints, mattresses, tufts and seams, floors and baseboards. Typically product does not stain but it is advisable to test a small area of mattress or carpet before treating larger area.

For storage areas it is recommended to re-apply LAST CRAWL™ each time the storage area is emptied. Product remains effective for as long as it is present. Repeat treatment as necessary.

OUTDOOR AND GARDEN USE: Clear away debris. Lightly coat areas with LAST CRAWL™ where pests are found including ant trails, door frames, entrance ways, foundations, patios, window frames, window sills, shrubs, flower beds, gardens etc. at a rate of 70 g product per 10 m². Pay careful attention to cracks, crevices, and other areas where insects hide or crawl. If applied with an attractant, the application rate can be reduced to 60 g product per 10 m². A fine dust of LAST CRAWL™ may be applied by using hand dusters or other suitable means. For best results, use in areas where dust application cannot be affected by heavy rains or high winds. For best results when applying to plants, use a light dusting of LAST CRAWL™ on both sides of the plant leaves. Product remains effective for as long as it is present. Repeat treatment as necessary.

WET POWDER APPLICATION: Mix 90 grams of LAST CRAWL™ per 1 L of water. Mix well before application, and continue mixing during application, some settling may occur. Apply to the point of wetness around foundations, shrubs, flower beds, gardens, etc. using a suitable applicator. 1 L of mixture will treat 10 m². Product remains effective for as long as it is present. Repeat treatment as necessary. For best results, use in areas where dust application cannot be affected by heavy rains or high winds. When applying to plants, use a light dusting of LAST CRAWL™ on both sides of the plant leaves. Repeat treatment as necessary.

When using LAST CRAWL™ for garden use, wash all produce thoroughly before using.

STORAGE: Store in a dry environment. To prevent contamination store this product away from food or feed.

DISPOSAL: Thoroughly empty the contents of the container into the application device. Do not re-use empty container. Wrap and dispose of empty container with household garbage.

FIRST AID: **If swallowed**, call a poison control centre or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a poison control centre or doctor. Do not give anything by mouth to an unconscious person. **If on skin or clothing**, take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control centre or doctor for treatment advice. **If in eyes**, hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control centre or doctor for treatment advice. **If inhaled**, move person to fresh air. If person not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible. Call a poison control centre or doctor for treatment advice. Take container, label or product name and Pest Control Product Registration Number with you when seeking medical attention.

TOXICOLOGICAL INFORMATION: Treat symptomatically.

PRECAUTIONS: KEEP OUT OF THE REACH OF CHILDREN. Avoid inhaling dust and use adequate ventilation. Avoid contact with eyes and skin. May cause irritation and soreness in throat and nose in cases of extreme exposure. Some congestion may occur. Do not use as a space spray. DO NOT use power dusters, power sprayers, air blowers or dust blowers. Do not apply in the immediate vicinity of people or pets. Wash hands with plenty of soap and water after treatment. Do not use on food or food contact surfaces. DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment.
