READ THE LABEL BEFORE USING

Fly Terminator Pro

Net contents: 2 water soluble pouches each 30 g

Milk Jugg Trap

Net contents: 2 water soluble pouches each 30 g

Captivator

Net contents: One 30 g water soluble pouch

Trap 'N Toss

Net contents: One 15 g water soluble pouch

Starbar Fly Attractant For Reusable Fly Traps

Net contents: [2-24] 30 gram water soluble pouches

Wellmark International
100 Stone Road West, Suite 111, Guelph ON N1G 5L3
1-800-688-7378

<<Fin-seal outer wrap of water soluble pouches sold with all traps except Fly Relief, Captivator Fly Trap and Giant Fly Relief >>

1. Bait and use traps outdoors.
2. Tear open packet(s) [at tabs] and drop inner pouch(es) into trap. Handle with dry hands or use gloves.
3. Do not open the inside pouch(es), it [they] will dissolve in the trap water.
4. Wash hands with soap and water after handling.
5. Empty trap and rebait using two 30 g water soluble attractant pouches when trap dries out or becomes full, or after 30 days, whichever comes first.

<<Fin-seal outer wrap of water soluble pouches sold with Captivator Fly Trap >>

1. Bait and use traps outdoors.
2. Tear open packet [at tabs] and drop inner pouch into trap. Handle with dry hands or use gloves.
3. Do not open the inside pouch, it will dissolve in the trap water.
4. Wash hands with soap and water after handling.
5. Empty trap and rebait using one 30 g water soluble attractant pouch when trap dries out or becomes full, or after 30 days, whichever comes first.

<<Alternate Resealable Bag of WSPs in the Starbar Fly Attractant Refills>>

1. Bait and use traps outdoors.
2. Open zipper bag to remove water-soluble attractant pouches and drop pouch into trap. Handle with dry hands or use gloves.
3. Use attractants promptly after removing from package, and keep them dry during handling.
4. Do not open the inside pouches, they will dissolve in the trap water.
5. Reseal zipper bag after removing water-soluble attractant pouches, and keep sealed when not in use.
6. Wash hands with soap and water after handling.

<<Text to appear on outside of trap for Fly Relief or Giant Fly Relief, or on the Fin-Seal outer wrapper for Captivator, Fly Terminator Pro and Trap 'N Toss>>

For outdoor use around homes, cottages and other residential buildings or around farm buildings (e.g. barns, stables). Traps should be placed in locations not accessible to children, pets, domestic animals or wildlife. Traps should be placed in areas of high house fly population and should be used as part of a house fly control strategy. When used in areas accessible to birds, bait must be placed in a bait station that prevents birds from consuming the bait.

DIRECTIONS FOR USE:

General:

Treated baits must be placed in locations NOT accessible to children, pets, livestock or wildlife. DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes.

I. For use with Fly Terminator Pro

1. NOTE: Attractant has a pungent odour; bait trap outdoors.
2. Tear open packet [at tabs] and drop inner pouches into trap. Handle with dry hands or use gloves.
3. Do not open the inside pouches, they will dissolve in the trap water.
4. Fill Fly Terminator Pro Trap one-third to one-half full with clean water and swirl trap slightly to disperse attractant.
5. Place trap on the ground in a sunlit area of high house fly concentration. Traps may also be hung from the handle or from the tab on top of jug.

<contains 2 x 30 g water soluble pouches>

MAINTENANCE: Trap contents should be agitated at least twice weekly to thoroughly wet all trapped flies. Add water to the trap jug as necessary to keep the jug half full of liquid. Do not allow trap to dry out. Remove trap when it is 1/3 or more full of flies. Trap may be reused; bait with two (30 g) water soluble pouches of Starbar Fly Attractant and fill the jug half full of water.

HELPFUL HINTS: In areas of very low fly density, the attractant may dissipate before enough flies are caught. To continue attraction when fewer than 50 or so flies are caught within 5 days of baiting, additional attractant should be added. Occasionally, spiders may set up housekeeping in the top assembly, greatly, reducing the trap's efficiency. If this occurs, remove top assembly and pull out spiders and webbing with a twig. Use several traps in different locations. A good trapping program should supplement proper manure management. Dead flies make an excellent natural fertilizer. Never seal dead flies in a closed container. Doing so may result in a hazardous explosion.

II. For use with Milk Jugg Trap

1. Rinse out a standard 4 litre (one-gallon) milk or water jug. Use only transparent type jugs, not opaque or coloured. Use two 30 g water soluble pouches into a 4 L (one-gallon) trap or one 30 g water soluble pouch into a 2 L (½ gallon) trap.
2. NOTE: Attractant has a pungent odour; bait trap outdoors.
3. Tear open packet [at tabs] and drop inner pouches into trap. Handle with dry hands or use gloves.
4. Do not open the inside pouches, they will dissolve in the trap water.
5. Fill the jug half full with clean water and swirl jug slightly to disperse attractant.
6. Slide cylinder part of trap head into mouth of jug.
7. Place trap on ground or hang by jug handle outdoors in a sunlit area of high house fly concentration when flies are active and wherever odours will not be a problem. For maximum effectiveness, trap should be within 1.21m (4 feet) of the ground.

<contains 2 x 30 g water soluble pouches>

MAINTENANCE: Trap contents should be agitated at least twice weekly to thoroughly wet all trapped flies. Add water to the trap jug as necessary to keep the jug half full of liquid. Do not allow trap to dry out. Remove trap when it is 1/3 or more full of flies. Trap head may be reused;

bait new jug with two (30 g) water soluble pouches of Starbar Fly Attractant and fill the jug half full of water.

HELPFUL HINTS: In areas of very low fly density, the attractant may dissipate before enough flies are caught. To continue attraction when fewer than 50 or so flies are caught within 5 days of baiting, additional attractant should be added. Occasionally, spiders may set up housekeeping in the top assembly, greatly, reducing the trap's efficiency. If this occurs, remove top assembly and pull out spiders and webbing with a twig. Use several traps in different locations. A good trapping program should supplement proper manure management. Dead flies make an excellent natural fertilizer. Never seal dead flies in a closed container. Doing so may result in a hazardous explosion.

III. For use with Trap 'n Toss Disposable Fly Trap

1. NOTE: Attractant has a pungent odour; bait trap outdoors.
2. Tear open packet [at tabs] and drop inner pouches into upside down trap. Handle with dry hands or use gloves.
3. Do not open the inside pouches, they will dissolve in the trap water.
4. While holding the trap upside down, pour in 472 ml (16 fluid ounces) of clean water (Fill to fill line.)
5. Agitate lightly to disperse attractant, and then slowly turn the trap right side up.

Place the trap outside, either hanging or on the ground, in a sunlit area of high house fly concentration where flies are active and wherever odours will not be a problem. When placing the trap on the ground, be sure that at least 0.6 cm (1/4 inch) of space is available between the trap body and the ground to permit flies to enter trap. If the trap must be placed on soft or sandy ground, place the trap on a piece of paper or cardboard to keep it from sinking in and hindering fly access.

Net contents: one 15 g water soluble pouch

IV. For use with Fly Relief Fly Trap and Giant Fly Relief Fly Trap

1. Remove film on top of trap by cutting dotted line ***inside*** of black rim seal.
2. Pull up trap top by tab until snapped into position.
3. Fill trap to "fill line" with clean water to activate the attractant.
4. Agitate lightly to disperse attractant.
5. Hang the trap outside in a sunlit area of high fly concentration where flies are active and where odours will not be a problem. For maximum effectiveness, trap should be within 1.21m (4 feet) of the ground.
6. The water soluble attractant pouch(es) is(are) inside trap bag and must not be removed.

MAINTENANCE: Trap contents should be agitated at least twice weekly to thoroughly wet all trapped flies. Add water as necessary to keep the fluid level 1 cm below the surface of trapped flies. Do not allow the trap to dry out. Without adequate agitation, fly larvae (maggots) may appear as a layer of dry dead flies accumulates in the trap. If this should occur, add one teaspoon of liquid dish soap and enough water to wet all flies thoroughly. Maggots will drown in soapy

water. Dead flies in trap may give off bad odour so care should be taken to keep trap contents from coming in contact with hands or clothing.

HELPFUL HINTS: In areas having exceptionally hard water, using distilled or purified water may improve trap performance. In areas of heavy fly populations, use several traps in different locations.

Net contents: (one or) two 30 g water soluble pouch(es)

V. For use with Captivator Fly Trap

1. NOTE: Attractant has a pungent odour; bait trap outdoors.
2. Tear open packet [at tabs] and drop inner pouches into upside down trap. Handle with dry hands or use gloves.
3. Do not open the inside pouches, they will dissolve in the trap water.
4. 2. Fill trap one-third to one-half full with clean water and agitate lightly to disperse attractant.
5. Set or hang trap outdoors in sunlit area of high house fly density.

Net contents: one 30 g water soluble pouch

PRECAUTIONS:

KEEP OUT OF REACH OF CHILDREN, PETS, DOMESTIC ANIMALS AND WILDLIFE.

May irritate the skin and eyes. Avoid contact with skin and eyes. Keep away from feed or food-stuffs. Do not use in homes or where food is processed or stored. Use only in areas inaccessible to food producing animals. Do not apply where poultry or animals can pick up or lick the product. Wash arms, hands, and face with soap and water after handling and before eating or smoking. Do not store or use undiluted Attractant near heat or flame. Do not contaminate feed, water, food or litter.

FIRST AID: If in eyes, hold eye open and rinse slowly and gently with water for 15–20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control centre or doctor for treatment advice. **If on skin or clothing,** take off contaminated clothing. Rinse skin immediately with plenty of water for 15–20 minutes. Call a poison control centre or doctor for treatment advice. **If swallowed,** call a poison control centre or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a poison control centre or doctor. Do not give anything by mouth to an unconscious person. Take container, label or product name and Pest Control Product Registration Number with you when seeking medical attention.

TOXICOLOGICAL INFORMATION:

Treat symptomatically.

ENVIRONMENTAL PRECAUTIONS:

DO NOT apply to any body of water. **DO NOT** contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes.

STORAGE:

Store Attractant in original, tightly sealed container. Store in a cool, dry place away from heat or open flame.-To prevent contamination store this product away from food or feed.

DISPOSAL:

DO NOT reuse the empty containers. Dispose in household garbage.

Unused or partially used products should be disposed at provincially or municipally designated hazardous waste disposal sites.

NOTICE TO USER: This pest control product is to be used only in accordance with the directions on the label. It is an offence under the Pest Control Products Act to use this product in a way that is inconsistent with the directions on the label.
