LIQUID ALGICIDE prevents growth and backs up the normal chlorine program for pool water protection. When used as directed, it is not affected by sunlight. Note: This product does not replace chlorine.

INITIAL DOSAGE: Add 500 mL for each 10,000 litres of water at different sites around edge of pool. Do not add chlorine immediately before or after adding ALGICIDE as this may cause temporary cloudiness in the water. Every 5 to 8 days, add 125 mL for each 10,000 litres of water for continued protection.

PRECAUTIONS: KEEP OUT OF REACH OF CHILDREN. Do not take internally. Avoid splashing in eyes. Store away from other pool chemicals and keep out of reach of children. Avoid contamination of food.

FIRST AID TREATMENT: If splashed in eyes, flush thoroughly with water for at least 15 minutes. If irritation persists, obtain medical attention promptly.

Made in Quebec
