DIRECTIONS FOR USE

Prior to the use of ACTION 2440 in water cooling towers, systems should be cleaned to remove algae growth, microbiological slime, and other deposits. Then make an initial slug addition of 0.5 to 1.0 litres of ACTION 2440 per 10,000 litres of water in the system. Repeat initial dosage until control is evident. Make

subsequent slug additions of 0.15 to 1.0 litres of ACTION 2440 per 10,000 litres of water every 2 to 5 days or as needed. The frequency of addition depends upon the relative amount of bleedoff and the severity of the microbiological problem. Slug additions should be made in the sump of water cooling towers.
