INSTRUCTIONS

Algae are microscopic plant like organisms which grow in the
water and thrive on sunlight. When allowed to grow in pool
water, algae will give the water a greenish or brownish haze and
if not controlled will give a slippery feel to the walls and
bottom of the pool.

By controlling algae growth with CHEMEX ALGAECIDE it may be
possible to use significantly less chlorine than would otherwise
be required.

DIRECTIONS

POOL START UP: To kill and control visible algae most commonly
found in swimming pools add 1.5 litres of CHEMEX ALGAECIDE per
10,000 litres of water. Vacuum any dead algae away.

MAINTENANCE-CONTROL: When existing growth is dead and withered
algae has been vacuumed away, inhibit algae growth by adding
325 ml of CHEMEX ALGAECIDE per 10,000 litres of water once every
week.

PRECAUTIONS

1.   Keep out of reach of children

2.   Avoid contact with skin and eyes
3.   Avoid contamination of food
4.   Do not mix with other pool chemicals
5.   Add directly to pool
6.   Rinse empty container thoroughly with water and discard it
7.   Harmful if swallowed
8.   To dispose of chemical, flush into sewer with large
      quantities of water.

FIRST AID

IN CASE OF CONTACT WITH SKIN AND EYES, WASH THOROUGHLY WITH
WATER. IF EYE CONTACT, GET MEDICAL ATTENTION. IF SWALLOWED,
DRINK 2 - 3 GLASSES OF WATER. CALL A PHYSICIAN IMMEDIATELY.
AVOID ALCOHOL.
