Earwigs are dark brown crawling insects approximately 2.5 cm (1 inch) in length. They can be easily identified by the pincers that extend from the rear of the body. Earwigs hide in plants, garden mulch and crevices during the day and feed at night. They feed on a wide variety of plants leaving holes in the foliage.

DIRECTIONS: MIX FRESH SOLUTION. Made of selected soaps that have contact insecticidal properties. Insects must be sprayed directly to achieve proper control. Mix one part concentrate to 50 parts water, or 10 mL per 500 mL.

For control, spray at dusk or later in all areas where earwig damage is evident. Spray all plants thoroughly including the soil. If spraying at night a light can be used to identify infestations. Repeat as required.

PRECAUTIONS: Concentrated soap may cause eye irritation. Avoid eye contact. Do not use on sweetpeas, nasturtiums or delicate ferns. Wash fruits and vegetables before using.

FIRST AID: If in eyes wash with plenty of water. If concentrate on skin, rinse with water. The active ingredients in this pesticide are specially selected soaps. No other pesticides are added.
