Mice and cockroaches are familiar with their territory because they explore it daily. Mice and cockroaches are difficult to bait because their feeding habits are small amounts of feed at several locations. Mice and cockroaches are then constantly on the move and Hi-Tak was developed to take advantage of this movement by allowing you to make your own "glue boards" on whatever surface you choose. Flying insects are attracted to the bright colour of Hi-Tak "glue boards" suspended from the ceiling. DO NOT PLACE IN DIRECT SUNLIGHT. This product is not ultra-violet tolerant. The adhesive is soluble in petroleum distillate which allows easy clean-up if necessary.

DIRECTIONS: SHAKE WELL BEFORE USING. Hold can upright and spray adhesive onto a non-porous, non-absorptive surface such as dense cardboard. To protect the adhesive from dirt and dust, spray it into a tubing about 8cm diameter by 20cm long. Place the "glue board" in areas that the rodent or crawling insect travels, such as along walls and underneath equipment. For Flying Insects, spray a non-absorptive surface such as cardboard and suspend from ceiling. DO NOT PLACE IN DIRECT SUNLIGHT. This product is not ultra-violet tolerant. Check regularly to see if rodents or insects have been trapped. Over a period of time the dust will accumulate on the adhesive making it less tacky. At this time, refurbish the "glue board" by spraying on more adhesive.

PRECAUTIONS: Contents under pressure. Do not place in hot water or near radiators, stoves or other sources of heat. Do not puncture or incinerate can or store at temperature over 50 deg C. Do not spray into or near open flame. KEEP OUT OF REACH OF CHILDREN.
