Notification Change

Made in U.S.A.

FIRST AID

- EYE CONTACT:** Flush eyes immediately with plenty of water for 15 minutes. Contact a physician.
- SKIN CONTACT:** Wash skin with plenty of soap and water. Remove and wash contaminated clothing before re-use. Contact a physician.
- INGESTION:** Administer water freely and induce vomiting. Repeat until vomit fluid is clear. Contact a physician.

IMPORTANT

Injury to or loss of desirable trees or other plants may result from failure to observe the following:

DO NOT apply, or drain or flush equipment on or near desirable trees or other plants, or on areas where their roots may extend, or in locations where the chemical may be washed or moved into contact with their roots. DO NOT use on lawns, walks, driveways, tennis courts, or similar areas. Prevent drift of dry powder or spray to desirable plants. DO NOT contaminate domestic waters. Keep from contact with fertilizers, insecticides, fungicides and seeds.

Thoroughly clean all traces of KROVAR 1 from application equipment immediately after use. Flush tank, pump, hoses, and boom with several changes of water after removing nozzle tips and screens (clean these parts separately).

GENERAL INFORMATION

Du Pont KROVAR 1 General Weed Killer is a wettable powder to be mixed in water and applied as a spray on non-cropland areas where bare ground is desired. It is an effective general herbicide for the control of many annual and perennial weeds, and is particularly useful for control of perennial grasses. Effects are slow to appear and may not become apparent until the chemical has been carried into the root zone of the weeds by moisture. The degree of control and duration of effect will vary with the amount of chemical applied, soil type, rainfall, and other conditions.

KROVAR 1 is non-corrosive to equipment, non-volatile, and non-flammable.

DIRECTIONS

Apply KROVAR 1 just before or during the period of active growth of weeds. Sufficient moisture from rainfall or artificial means is necessary after treatment to carry the chemical into the root zone of the weeds. If dense growth is present, results will be improved if vegetation is removed before treatment. Do not apply when ground is frozen.

Before spraying, calibrate equipment to determine the quantity of water necessary to uniformly cover a measured areas to be treated. Weigh the proper amount of KROVAR 1 and mix into the necessary volume of water (minimum of 20 L per kg of KROVAR 1).

Material must be kept in suspension at all times by continuous agitation. Except for small areas, use fixed-boom power sprayers properly calibrated to insure constant rate of application. Openings in screens should be equal to or larger than 50 mesh. Agitate by mechanical or hydraulic means in the spray tank. If by-pass or return line is used, it should terminate at bottom of tank to minimize foaming. Do not use air agitation. For treating small areas, a tank-type hand sprayer or sprinkling can may be used; shake or stir frequently.

GENERAL WEED CONTROL

To control most weeds on non-cropland areas such as RAILROAD and PIPELINE RIGHTS-OF-WAY, PETROLEUM TANK FARMS, LUMBERYARDS, STORAGE AREAS, AND INDUSTRIAL PLANT SITES.

Apply 13.5-18 kg per ha to control annual and perennial grasses and most broadleaved weeds such as crabgrass, foxtail, pigweed, ragweed, quackgrass, wild carrot, and dandelion.

Use higher rates on soils high in organic matter (5% or more) or on clay soil in Eastern Canada. Use 13.5 kg rate on sand or sandy loam soils only.

RE-TREATMENT - Apply 6.75-9 kg per ha when annual weeds and grasses reappear on sites where weed growth has been controlled.

KROVAR + TELAR TANK MIXTURE - TELAR may be tank mixed with KROVAR for control of Canada thistle, field horsetail, kochia, Russian thistle, and dandelion, and other broadleaf weeds controlled by TELAR. Apply 120 grams TELAR per hectare with the re-treatment rate (6.75 - 9.0 kg/ha) of KROVAR. Add a non-ionic surfactant registered for use with TELAR to the spray mixture at 1 Litre/1000 L (0.1% v/v).

Refer to the "Non-Crop Land" Section of the TELAR label for instructions on timing of application.

DIRECTIONS FOR MIXING

- 1) Fill the sprayer tank half full, and, with the agitator running, add the required amount of TELAR.
- 2) If desired, add the rest of the water and then add the required amount of KROVAR.
- 3) If desired, add the required amount of surfactant.

FOR SMALL AREAS - 180 g of KROVAR 1 per 100 m² is approximately 18 kg per ha.

STORAGE AND DISPOSAL:

Storage:

Store product in original container only, away from other pesticides, fertilizer, food and feed. Not for use or storage in or around the home. Keep container closed.

Disposal:

1. Rinse the emptied container thoroughly and add the rinsings to the spray mixture in tank.
2. Follow provincial instructions for any required additional cleaning of the container prior to its disposal.
3. Make the empty container unsuitable for further use.
4. Dispose of the container in accordance with provincial requirements.
5. For information on the disposal of unused, unwanted product and the cleanup of spills, contact the regional office of Conservation and Protection Environment Canada.

NOTICE TO USER: This control product is to be used only in accordance with the directions on this label. It is an offense under the PEST CONTROL PRODUCTS ACT to use a control product under unsafe conditions.

NOTICE TO BUYER: Seller's guarantee shall be limited to the terms set out on the label and subject thereto, the buyer assumes the risk to persons or property arising from the use or handling of this product and accepts the product on that condition.

Purchase of this material does not confer any rights under patents of countries outside Canada.
