**DIRECTIONS FOR USE**

**1) Cooling Tower Systems:**

Prior to use in water cooling towers, systems should be cleaned to remove organic, inorganic and microbiological deposits. An initial slug addition of 800 to 1200 mL per 10,000 liters of water should then be added to the sump of the cooling water towers. Repeat the initial dosage until control is evident. Subsequent slug additions of 400 to 1200 mL per 10,000 liters of water should be added every 2 to 5 days or as needed. The frequency of addition will depend on the relative amount of bleedoff and the severity of the microbiological problem.

## 2) Industrial Air Washing Systems:

Prior to use in air washers, systems should be cleaned to remove organic, inorganic and microbiological deposits. An initial slug addition of 186 to 236 mL per 1,000 liters of water should then be added to the sump or the water collector trays. Repeat the initial dosage until control is evident.

Subsequent slug additions of 86 to 236 mL per 1,000 liters of water should be added every 1 to 5 days or as needed. The frequency of addition will depend on the relative amount of bleedoff and the severity of the microbiological problem.

For use only in systems equipped with effective mist eliminating components.
