WILSON ROZOL PARA-BLOCK is a weatherproof formulation which can be used in high moisture areas such as sanitary and storm sewers as well as other outdoor uses where weather, proof baits are required. There is no bait shyness, pre-baiting is not required.

DIRECTIONS:

For control in Sanitary and combination Sanitary - Storm Sewers, secure a rodent block to one end of wire and attach other end of wire to the bottom step of manhole ladder, allowing just enough wire for rodent block to rest on the manhole benching. In sewers with no benching at manhole, secure Para-Block to an end of wire and other end of wire to manhole ladder keeping the block above water level. A board may be placed across the sewer resting on opposite steps and the Para-Block (secured to manhole ladder by wire) placed on

the board for the rodents to feed.

FOR CONTROL IN STORM SEWERS: Para-Block can be suspended from the sewer grating with wire attached to the grate so that the Para-Block remains a few centimeters above normal water level.

NOTE: In all installations, Para-Blocks should be secure with wire so that they do not float or get carried away. Where rat infestations appear extremely heavy, use 2 or more Para-Blocks in each manhole.

OTHER OUTDOOR USES:

Along drainage ditches, sewage lagoons, dumps, landfill sites, and areas where rats are a problem, place rodent blocks into the rat burrows ensuring that they are secured with tie wire to a stake well planted in the ground. Care should be taken to ensure that the bait blocks are protected from accidental access to other animals or humans.

Keep baited areas well supplied. Continuous feeding from 5 to 14 days should bring control. Bait should be available to rodents until complete lack of feeding is noticed. Never allow the baited sewers to remain empty for over 48 hours.

PRECAUTIONS:

KEEP OUT OF REACH OF CHILDREN, DOMESTIC ANIMALS, PETS AND WILDLIFE. Keep away from feed or foodstuffs. Harmful if swallowed or absorbed through the skin. This product should be handled with gloves. Do not get in eyes, on skin, or on clothing. Wash arms, hands and face with soap and water after handling and before eating or smoking. Protect bait, at time of application, from access by children, pets, livestock and wildlife, preferably by using Wilson bait stations or tamper-resistant boxes. This product is toxic to fish and wildlife.

The use of anticoagulant formulations can present a significant hazard to predatory mammals and birds through secondary poisoning. Do not contaminate water by cleaning of equipment or disposal of wastes. Keep out of lakes, streams or ponds.

FIRST AID:

If in eyes, flush with plenty of water for 15 minutes. If irritation develops, consult a physician. If on skin, wash thoroughly with soap and water. If swallowed, give patient one or two glasses of water and induce vomiting by touching

back of the throat with a finger or blunt object. Repeat until vomit fluid is clear. Do not give anything by mouth to an unconscious person. Contact a physician or Poison Control Centre immediately.

TOXICOLOGICAL INFORMATION:

If swallowed by humans, domestic animals or pets, this material may reduce the clotting ability of the blood and cause bleeding. Vitamin K1, in the form of intravenous, intramuscular or subcutaneous injections, or by oral ingestion are suggested remedial treatments for anticoagulant poisoning. The severity of the case, measured by establishing prolonged prothrombin times (P.T.) will determine appropriate therapy. Monitoring P.T. will indicate the necessity of repeated treatments.

DISPOSAL:

Do not reuse empty container. Dispose of unused or spoiled bait in accordance with local requirements. Follow provincial instructions for any required cleaning of the container prior to its disposal. Make the empty container unsuitable for further use. Dispose of the container in accordance with provincial requirements. For more information on the disposal of unused, unwanted product and the cleanup of spills, contact the Provincial Regulatory Agency or the Manufacturer.

Rodent disposal: Dispose of dead rodents in garbage or by burying.

NOTICE TO USER: This control product is to be used only in accordance with the directions on this label. It is an offence under the Pest Control Products Act to use a control product under unsafe conditions.

NOTICE TO BUYER:

Seller's guarantee shall be limited to the terms set out on the label and subject thereto, the buyer assumes the risk to persons or property arising from the use or handling of this product and accepts the product on that condition.
