INSTRUCTIONS: Algae are microscopic plant like organisms which growth in the water and thrive on sunlight. When allowed to grow in pool water, algae will give the water a greenish-or-brownish haze and if not controlled will give a slippery feel to the walls and bottom of the pool.

By controlling algae growth with Chemex Algaecide, it may be possible to use significantly less chlorine than would otherwise be required.

DIRECTIONS:

POOL START UP: To kill and control algae most commonly found in swimming pools, add 500 mL of Chemex Algaecide per 10,000 litres of water. Vacuum any dead algae away.

MAINTENANCE-DAILY CONTROL: When existing growth is dead and withered algae has been vacuumed away, inhibit algae growth by adding 250 mL of Chemex Algaecide per 10,000 litres of water once every week.

SHOCK TREATMENT: Add 500 mL of Chemex Algaecide per 10,000 litres of water.

WINTERIZING: When water is left in the pool during the off-season, protect your pool water against algae growth by applying 500 mL of Chemex Algaecide per 10,000 litres of water.

PRECAUTIONS:

1. Keep out of reach of children.
2. Avoid contact with skin and eyes.
3. Avoid contamination of food.
4. Do not premix with other pool chemicals.
5. Rinse empty container thoroughly with water and discard it.

FIRST AID: In case of contact with skin and eyes, wash thoroughly with water. If irritation persists, get medical attention. If swallowed drink milk, egg whites, gelatin solution, or if these are not available, drink large quantities of water. Call a physician.
