SWIMMING POOL ALGAECIDE

The presence of algae in outdoor swimming pools is objectionable because of the color, cloudiness, odor and increased chlorine demand of the water. The use of Algaecide will help to maintain the water in a clean condition.

Algaecide is compatible with the usual water treatment chemicals. By controlling algae growth with Algaecide, it may be possible to use significantly less chlorine in the pool to obtain equivalent results.

Algaecide contains no heavy metals such as mercury or copper, phenols, or available chlorine. It is nontoxic to humans in recommended pool dilutions.

DIRECTIONS

- 1) To kill and control the algae species most commonly found in swimming pools, add 500 mL of Algaecide for each 10,000 L of water.
- 2) When existing growth is dead and algae have withered, clean the pool, draining and refilling if necessary, then add 225 mL per 10,000 L of water.

CAUTION

KEEP OUT OF REACH OF CHILDREN

Undiluted Swimming Pool Algaecide concentrate may cause skin irritation or damage of the eyes. Harmful if swallowed. Avoid contact with skin and eyes. Do not take internally.

FIRST AID

In case of contact flush immediately with plenty of water. For eyes, get medical attention. Avoid contamination of food.
