READ THE LABEL BEFORE USING

500 g

WILSON LABORATORIES INC.
DUNDAS, ONTARIO L9H 3H3

Wilson's Bacon & Cheese Flavoured Warfarin & Prolin contains an anticoagulant chemical that reduces the clotting ability of the blood, PLUS Sulfaquinoxaline which inhibits the production of Vitamin K, a natural antidote to Warfarin. Wilson's Warfarin & Prolin is more effective against hard-to-kill rats and mice. After several feedings they die from fatal hemorrhage.

DIRECTIONS: Place 250g to 500g bait feeding stations in locations frequented by rats and mice, near rat holes, runways or burrows; or against walls or in corners where mice are seen.

Protect from children, pets and livestock by means of bait boxes such as inverted box with 5 cm cut-out holes, large can with both ends removed, drain tile, board leaning against wall, etc.

Replenish as needed to ensure continuous supply of fresh bait for 12 to 14 days or until complete lack of feeding is noted. A

shallow container of drinking water encourages consumption of bait.

PRECAUTION: Protect children, pets, domestic animals and fowl from bait.

FIRST AID: If swallowed cause vomiting until fluid is clear. Call a doctor in case of accident.

TOXICOLOGY: Blood transfusions combined with intravenous injections and oral doses of Vitamin K are indicated.
