Refer to and retain carton for “DIRECTIONS FOR USE”.

PRECAUTIONS: KEEP OUT OF REACH OF CHILDREN.

May be harmful if swallowed, inhaled or absorbed through the skin. Wash with soap after use or before eating or smoking. Wash contaminated clothing. Moderately toxic to bees, do not spray when trees are in flower. Do not contaminate food, feed or water. Keep container from freezing.

FIRST AID: If swallowed, induce vomiting by taking warm water. **If in eyes**, flush with water for 15 minutes. Get medical attention or contact a poison control centre. Take container, label or product name and P.C.P. Registration Number with you when seeking medical attention.

TOXICOLOGICAL INFORMATION: Phosalone is a cholinesterase inhibitor, atropine is antidotal.

DISPOSAL: Do not reuse empty container. Dispose of empty container with regular garbage.

For additional product information or in case of emergency, spills or fire, call toll-free 1-800-268-2806.

DIRECTIONS: SHAKE WELL BEFORE USING. This product controls most insects and diseases on apple, pear, peach, plum, cherry and grape, if used as directed. (Apple maggot is very difficult to control if unsprayed apple or hawthorn trees grow nearby.)

NOTE: For overwintering insects on fruit trees use Wilson Liquid Lime Sulphur Dormant Spray; for wood borers on peach and plum use Wilson Borer and Weevil Killer. ~~for powdery mildew on grapes use Wilson Benomyl.~~

Notification Change

RATE: Mix 30 mL (2 level tablespoonfuls) per 3 L of water or 250 mL per 25 L. Use 30 mL (2 tablespoonfuls) per 2 L or 375 mL per 25 L for apple maggot on apple and prune from late June until mid-August. Stir well before spraying.

TIME OF APPLICATION: This product will give good results only if applied before insects and diseases attack fruit trees or grapes. On apple and pear apply when green leaflets show, repeat before first flower buds open, again when bloom is finished and thereafter at intervals of 10 to 12 days until mid-August. On peach, plum and cherry apply just as first few flowers buds are opening, repeat when green shucks covering newly formed fruit begin to split and thereafter at 10 to 12 day intervals until August. On grapes apply just before and just after bloom, and again 12 days later. Another application may be needed in late August. May be applied up to 7 days before harvest of apple, pear, cherry, 14 days for plum and grape, 21 days for peach. During hot weather spray in early morning or evening.

PRECAUTIONS: KEEP OUT OF REACH OF CHILDREN.

May be harmful if swallowed, inhaled or absorbed through skin. Wash with soap after use or before eating or smoking. Wash contaminated clothing. Moderately toxic to bees, do not spray when trees are in flower. Do not contaminate food, feed or water. Keep container from freezing.

FIRST AID: If swallowed, induce vomiting by taking warm water. **If in eyes,** flush with water for 15 minutes. Get medical attention or contact a poison control centre. Take container, label or product name and P.C.P. Registration Number with you when seeking medical attention.

TOXICOLOGICAL INFORMATION: Phosalone is a cholinesterase inhibitor, atropine is antidotal.

DISPOSAL: Do not reuse empty container. Discard empty container with household garbage.
