DIRECTIONS FOR USE: COOLING TOWER SYSTEMS: Prior to the use of AG447 in water cooling towers, systems should be cleaned to remove algae growth, microbiological slime and other deposits. DOSE: make an initial slug addition of 400 to 600 mL of AG447 per 10,000 litres of water in the system. Repeat initial dosage until control is evident. Make subsequent slug additions of 200 to 600 mL of AG447 per 10,000 litres of water every 1 to 5 days or as needed. The frequency of addition depends upon the relative amount of bleedoff and the severity of the microbiological problem. Slug additions should be made in the sump of water cooling towers.
