EPA Est. No. 68215-FL-001

Safetiworld insect control products are made from a unique patented formula containing silicon dioxide (diatomaceous earth) and a patented bait formula. This is an odorless and non-staining powder. The product remains effective as long as the product is present and dry and the surrounding humidity remains low. Insects desiccate, usually within 48 hours.

DIRECTIONS: Remove the cap and cut the application tip with scissors or a knife.

Indoor Use: Cockroaches, ants, fleas, earwigs, silverfish, crickets, millipedes and centipedes. Lightly dust areas with 50 g product per 10 square metres where these pests are found or may hide such as cracks, crevices, under and behind the stove, refrigerator, sinks, cabinets, shelves, baseboards, garbage cans, around pipes and drains, window frames and in attics and basements. Dust the insects directly where possible and repeat treatment as necessary.

Outdoor Use: Lightly coat the areas where insects are found or may hide including ant hills and trails, ground foundations, window frames, door sills, patios, garages, sheds, outside entrance ways, cracks and crevices. Repeat as necessary.

PRECAUTIONS: Avoid breathing the dust. Do not use as a space spray. Avoid contact with eyes. Do not treat pets with product.

FIRST AID: If inhaled, move to fresh air, drink water to clear throat and blow nose to evacuate dust. If in eyes, rinse with clean water. If irritation persists, seek medical attention.

DISPOSAL: When container is empty dispose in household garbage. Do not reuse container.
