Purina Rub-On Liquid Horse Insecticide contains a combination of insecticides and fly repellents in a blend of fine grooming oils. When applied as directed, stable flies, horn flies, house flies, mosquitoes and gnats are repelled or killed. Flies not repelled stop biting and soon drop to ground and die. Use same directions for use of this product on beef or dairy show cattle.

DIRECTIONS

Apply with a cloth which is slightly moistened with the product.

Use 30 to 60 mL of product per horse each day for a 3 day period. Repeat after 2 days have elapsed and every second day thereafter or when insects again disturb the animal. Briskly run cloth against growth of hair on legs, shanks, belly, shoulders, neck and face area.

Colts and Calves: treat very lightly once a day, instead of attempting to build up a residual repellency by treating more heavily. For best fly protection, apply during morning hours: for mosquitoes, apply early in the evening. Dusty animals should be brushed before applying Purina Rub-On Liquid Horse Insecticide. Keep cloth in closed metal container between treatment periods.

PRECAUTION: Do not store near an open flame. Do not wet the skin of the animals. Avoid contamination of feed, foodstuffs, milk and milking utensils. Wash hands after applying.

FIRST AID: This product contains petroleum distillate. If ingested do not induce vomiting. If patient is conscious give him air. Obtain medical attention immediately.

Notice to user: This control product is to be used only in accordance with the directions on this label. It is an offense under The Pest Control Products Act to use a control product under unsafe conditions.
