SLUG-HEM

For the Control of Slugs and Snails in Gardens and Greenhouses

**DIRECTIONS FOR USE:**

IN THE GARDEN

SLUG-HEM can be well dusted around plants, or shaken into small heaps about 1 metre apart. It

cannot harm foliage or even young seedlings. A good idea is to cover the little heaps of bait with boards or tiles, the natural hiding places for Slugs and Snails.  
Best time to bait is on damp evenings or after watering.

#### IN THE GREENHOUSES

Two methods of baiting are recommended. One is to dust the SLUG-HEM thinly under benches, around walks and on the beds, and it will not hurt to scatter it over the leaves of young plants. Do not contaminate edible parts of food crops. The other method is to place small heaps of SLUG-HEM (about 50 ml) on the bench and under the bench about 1 metre apart. In both cases the earth should be well wetted.

#### FIRST AID

If swallowed give one to two glasses of water and induce vomiting. Do not induce vomiting if the patient is unconscious. Seek medical attention or call a poison control centre immediately.

#### TOXICOLOGICAL INFORMATION

Symptoms of poisoning: drowsiness, tachycardian, salivation, facial flushing, acetinuria, restlessness, abdominal pain, nausea, urine protein positive.

#### PRECAUTIONS

1. Harmful if swallowed
2. Dogs and cats are attracted to metaldehyde baits and poisoning may result. Keep pets from treated areas.
3. KEEP OUT OF REACH OF CHILDREN AND DOMESTIC ANIMALS. MAY BE FATAL TO DOGS.
4. Wash hands after using.
5. Store in a dry place.

#### DISPOSAL

Do not reuse empty container. Wrap empty container and discard in household garbage.

METALDEHYDE MIXTURE
