WARFARIN RAT AND MOUSE KILLER BAIT

This rodenticide contains WARFARIN, an anticoagulant, which causes rats and mice to bleed to death.

DIRECTIONS:

Place 250 - 500 g feeding stations in locations where evidence of rats and mice is noticed. Protect stations from children, pets,

other animals and weather by means of bait boxes, slanting boards, etc. Examine baits regularly and replenish for at least 12 - 14 days or until feeding stops. Replace wet or mouldy baits. For mice, divide the contents into smaller bait stations (15 - 60 gram placements) each well protected and place every 3 - 4 metres to ensure more adequate control.

PRECAUTIONS:

KEEP BAIT OUT OF REACH OF CHILDREN, PETS AND DOMESTIC ANIMALS.

FIRST AID:

If swallowed, induce vomiting until vomit fluid is clear. Obtain prompt medical attention.

TOXICOLOGICAL INFORMATION:

Vitamin K1 in the form of intravenous, intramuscle or subcutaneous injections, or by oral ingestion are suggested remedial treatments for anticoagulant poisoning. The severity of the case measured by establishing prolonged prothrombin times (P.T.) will determine appropriate therapy. Monitoring P.T. will indicate the necessity of repeated treatments.

DISPOSAL:

Dispose of empty container in household garbage. Dispose of unused and stale bait in accordance with local requirements.
