Richmond, British Columbia V7A 4X6

PRECAUTIONS: Keep out of reach of children.

Strong oxidizing agent. May cause fire or explosion if contaminated. Dangerous gas formed when mixed with acid.

Do not mix with any other chemical. Avoid contact with skin and eyes. Harmful or fatal if swallowed.

Keep container closed and store in a cool, dry location away from heat or sunlight.

Rinse container thoroughly before discarding. Do NOT reuse.

To dispose of chemical, flush into sewer with large quantities of water.

First Aid: If splashed in eyes or on skin, flush thoroughly with water for 15 minutes. For eye contact, get medical attention. If swallowed, drink two or three glasses of milk or water. Call a physician immediately.

DIRECTIONS FOR USE

1. Maintain recommended daily levels as determined by testing kit.

Free available chlorine:	1.0 - 3.0 ppm
pH:	7.2 - 7.8 ppm
Total Alkalinity:	80 - 120 ppm
Calcium Hardness:	200 - 300 ppm

2. To minimize bleaching of vinyl liners, predissolve required amount of Aquapool in a plastic pail with concentration not exceeding 1kg per 10L of water. Always add chemical to water, never water to chemical. Broadcast resulting slurry directly to pool water.
3. Initially, superchlorinate pool water by adding 150g of the predissolved Aquapool per 10,000L of pool water. For best results superchlorinate at dusk.
4. Maintain proper chlorine residual by broadcasting daily over the pool's surface, 30 g of the predissolved Aquapool per 10,000L of pool water, or as needed.

Note: Hot weather, heavy pool usage, and rain may require higher usage rates to maintain proper chlorine residuals.

5. Superchlorinate weekly with 150g of the predissolved Aquapool per 10,000L when average daily temperature is 25'C - 32'C, otherwise, superchlorinate every other week.
6. For visible algae superchlorinate using 350g of Aquapool per 10,000L of pool water. Heavy algae infestation may require dosages up to 500g per 10,000L. Vacuum pool when dead algae settles.

Note: For outdoor pools, chlorine residuals can be protected from destruction by sun's rays by addition of stabilizer (cyanuric acid).
