SUGGESTED USE: For control of Norway Rats, Roof Rats, House Mice in and around homes industrial and agricultural buildings. This product can be used in wet or damp locations such as river banks, railroad tracks, loading areas, in or around Rat holes, under granaries, along fences, garbage dumps, landfills, etc. All outdoor placements MUST be made in tamper-resistant bait stations.

RATABAN "D" is equally effective in dry areas such as the insides of buildings and other protected areas. Place baits in tamper-resistant bait stations along walls, in corners and in concealed locations where Rats can feed undisturbed. Check bait stations daily and ensure that an uninterrupted supply of RATABAN "D" is available. Maintain an uninterrupted supply of bait for at least 15 days. Continue baiting until all signs of feeding have stopped.

DIRECTIONS: Determine areas where Rats and/or Mice will most likely consume the bait. Generally, these areas are along walls, by gnawed openings, in or beside burrows, in corners and concealed places between floors and walls, or in places where rodents or their signs have been observed. Use only in non-food or non-feed areas where feed, food, food packaging and handling equipment are NEVER opened or exposed.

RATS: Apply 113 to 454 g of bait (usually at intervals of 5 to 9 metres) per placement.

MICE: Apply 7 to 14 gms of bait at 2 to 3 1/2 metre intervals. Larger placements (up to 57 g) may be needed at points of very high mouse activity. Keep treated areas well supplied. RATABAN "D" should be available to rodents until complete lack of feeding is noticed. Never allow the treated areas to remain empty for over 48 hours.

PRECAUTIONS: KEEP OUT OF REACH OF CHILDREN, PETS, DOMESTIC, ANIMALS AND WILDLIFE. Do not expose treated bait in areas accessible to children, dogs, domestic animals and wildlife except when enclosed within a tamper-resistant bait box. Keep away from feed or foodstuffs. Do not get in eyes, on skin or on clothing. Wash arms, hands, and face with soap and water after handling and before eating or smoking. Keep out of lakes, streams or ponds.

FIRST AID: If in eyes, flush with water for 15 minutes. If on skin, wash with soap and water. If swallowed, give patient one or two glasses of water and induce vomiting by touching back of throat with a finger or blunt object, repeat until vomit fluid is clear. Do not give anything by mouth to an unconscious person. Contact a physician or Poison Control Centre immediately.

TOXICOLOGICAL INFORMATION: Diphacinone is an anticoagulant. Vitamin K1, in the form of intravenous, intramuscular or subcutaneous injections, or by oral ingestion, are suggested remedial treatments for anticoagulant poisoning. The severity of the case measured by establishing prolonged prothrombin times (P.T.) will determine appropriate therapy. Monitoring P.T. will indicate the necessity of repeated treatments.

DISPOSAL: Do not reuse empty container. Dispose of unused or spoiled bait in accordance with local requirements. Follow provincial instructions for any required cleaning of container prior to its disposal. Make empty container unsuitable for further use. Dispose of the container in accordance with provincial requirements. For information on the disposal of unused, unwanted product and the cleanup of spills, contact the Provincial Regulatory Agency or manufacturer.

RODENT DISPOSAL: Dispose of dead rodents in garbage or by burying.

NOTICE TO USER:

This control product is to be used only in accordance with the directions on this label. It is an offence under the Pest Control Products Act to use a control product under unsafe conditions.

NOTICE TO BUYER: Seller's guarantee shall be limited to the terms set out on the label and subject thereto, the buyer assumes the risks to persons or property arising out of the use or handling of this product and accepts the product on that condition.
