KILLS RATS RESISTANT TO WARFARIN AND PINDONE

BROMONE*

DIRECTIONS: For the control of rats and mice. Place baits near living and feeding areas and water supplies, such as around wall perimeters, in rat holes, between walls or other protected areas.

FOR MICE: 10 - 15 g of bait should be placed at 3 to 4 meter intervals. An uninterrupted supply of bait should be maintained at least 15 days.

FOR RATS: Each station should contain at least 120 g of bait, however, smaller bait placements of 30 - 60 g may be used when more placements are needed to efficiently feed the rat population present. Maintain constant supply of bait at stations for at

least 10 days.

ONE DAY FEEDING WILL ACHIEVE CONTROL: when the baiting treatment utilizes a sufficient number of placements that have been consumed by the rats. Control will be evident, however, only in the following days.

PRECAUTIONS: PLACE BAITS IN TAMPER-PROOF BAIT BOXES OR PROTECTED AREAS INACCESSIBLE TO CHILDREN, PETS, AND LIVESTOCK.

TOXICOLOGY; If swallowed by humans, domestic animals, pets, this material may reduce the clotting ability of the blood and cause bleeding.

FIRST AID: In case of ingestion, intravenous and oral administration of Vitamin K1 combined with blood transfusions are indicated as in the case of hemorrhage caused by over-doses of bishydroxycoumarin. Call a physician immediately.

NOTICE TO USER: This control product is to be used only in accordance with directions on this label. It is an offense under the Pest Control Act to use a control product under unsafe conditions.

LIMITATION OF WARRANTY: Seller's guarantee shall be limited to the terms set out on the label and subject thereto, the buyer assumes the risk to persons or property arising from the use of handling of this product and accepts the product on that condition.
