

Evaluation Report for Category B, Subcategory 3.8 Application

Application Number: 2015-0576
Application: Changes to Product Label – Re-Entry Interval
Product: Clearview Herbicide
Registration Number: 29752
Active ingredients (a.i.): Metsulfuron-methyl, Aminopyralid
PMRA Document Number : 2615756

Purpose of Application

The purpose of this application was to amend the end-use product, Clearview Herbicide, containing the active ingredients metsulfuron-methyl and aminopyralid, by changing the re-entry interval and making label improvements.

Chemistry Assessment

A chemistry assessment was not required for this application.

Health Assessments

Toxicology and food residue assessments were not required for this application.

Worker exposures while conducting post-application activities in non-crop areas treated with Clearview Herbicide are not expected to increase when the restricted entry interval is reduced from 12 hours to ‘until sprays have dried’. However, the standard agricultural restricted entry interval of 12 hours must remain on the label.

Environmental Assessment

An environmental review was not required as the change in re-entry intervals and other label improvements are not expected to increase environmental exposure and risk associated with the use of the registered product. Environmental concerns are mitigated through existing statements on the product label.

Value Assessment

A value assessment was not required for this application.

Conclusion

The Pest Management Regulatory Agency has completed an assessment of the available information. The change in re-entry interval from 12 hours to “until sprays

have dried” was supported only for non-crop areas on the Clearview Herbicide label. The re-entry interval will remain as 12 hours for the agricultural uses on the label.
