

Evaluation Report for Category B, Subcategory 3.3 Application

Application Number: 2021-6088
Application: Changes to Product Labels – Application Number or Frequency
Product: Orondis Ultra Fungicide
Registration Number: 32805
Active ingredients (a.i.): Mandipropamid and Oxathiapiprolin
PMRA Document Number : 3425189

Purpose of Application

The purpose of this application was to amend the product label of Orondis Ultra Fungicide to increase the number of sequential applications on basil before switching to a product with a different mode of action.

Chemistry Assessment

No chemistry assessment was required for this application.

Health Assessments

No health assessments were required for this application.

Environmental Assessment

After a scientific review of the available information, the PMRA has concluded that the environmental risks associated with the amended use of Orondis Ultra Fungicide are acceptable when used according to the label directions.

Value Assessment

A rationale based on the registered labels of similar products supported the claim to increase the number of sequential applications of Orondis Ultra Fungicide on basil from one to two without changing the total number of applications per crop. The increase in the number of sequential applications of Orondis Ultra Fungicide on basil is not expected to affect efficacy or crop tolerance of the product.

The increased number of sequential applications will provide greater flexibility for growers who wish to use Orondis Ultra Fungicide to control basil downy mildew and manage fungicide resistance.

Conclusion

The Pest Management Regulatory Agency has completed an assessment of the information provided, and has found the information sufficient to support the amendment to the product label of Orondis Ultra Fungicide.
