

## Evaluation Report for Category B, Subcategory 4.1 Application

**Application Number:** 2001-0870  
**Application:** B.4.1 – Conversion to Full Registration without Consultation  
**Product:** Cuprous Thiocyanate Technical  
**Registration Number:** 25546  
**Active ingredient (a.i.):** Copper Thiocyanate (a.k.a. elemental copper)  
**PMRA Document Number:** 2262133

### Purpose of Application

A conditional registration for cuprous thiocyanate was granted in 1996. At that time, a review of the toxicological database for cuprous thiocyanate was conducted; however, the conditional registration was contingent on the submission of adequate reproductive and developmental toxicological information on cuprous thiocyanate. Additional toxicology data were supplied by the registrant in submission 2001-0870. The additional reproductive and developmental information were factored into the risk assessment to support the conversion of cuprous thiocyanate from conditional to full registration.

### Health Assessments

The assessment of cuprous thiocyanate was based on literature information provided by the registrant and literature information on copper and thiocyanate ions. Based on the collective information, it was concluded that no further information is required at this time.

### Chemistry, Environmental and Value Assessments

The chemistry, environmental and value assessments were not required for this application.

### Conclusion

The Pest Management Regulatory Agency has completed an assessment of the subject application and found the information sufficient to grant cuprous thiocyanate full registration.
