

Evaluation Report for Category B, Subcategory B.3.11 Application (New or Changes to Product Label – New Pests)

Application Number: 2015-1405
Application: Category B.3.11 (New or changes to product label – New pests)
Product: DuPont Travallas Herbicide
Registration Number: 31685
Active ingredients (a.i.): 3 g/L metsulfuron-methyl, 30 g/L thifensulfuron-methyl, and 150 g/L fluroxypyr
PMRA Document Number : **2569938**

Background

DuPont Travallas Herbicide is registered for post-emergent control or suppression of broadleaf weeds in spring wheat (including durum wheat) and spring barley. For specific details of uses, application rates and methods, precautions, restrictions, and personal protective equipment requirements, refer to the product label.

Purpose of Application

The purpose of this application was to amend the registration of DuPont Travallas Herbicide to include a control claim for flixweed at the labeled rate of 0.5 L product/ha.

Chemistry, Health, and Environmental Assessments

Chemistry, health, and environmental assessments were not required as there was no change to product chemistry, product formulation, or use pattern.

Value Assessment

The addition of a control claim for flixweed to the DuPont Travallas Herbicide label would provide cereal growers with another herbicide option to control this problematic weed. Furthermore, DuPont Travallas Herbicide includes two distinct modes of action to provide control of group 2 resistant flixweed populations.

Value information, which included sound scientific rationale and information from an operational trial conducted in Alberta at Torrington in 2014, demonstrated that DuPont Travallas Herbicide at 0.5 L product/ha provided acceptable control of flixweed.

Conclusion

The PMRA has completed an assessment of the subject application and has found the information sufficient to amend the registration of DuPont Travallas Herbicide to include control

of flixweed.
