

Evaluation Report for Category B, Subcategory B.3.10 Application (New or Changes to Product Label – Tank Mixes)

Application Number: 2020-1586
Application: Category B.3.10 (New or changes to product label – Tank mixes)
Product: PP-23235 Herbicide
Registration Number: 29262
Active Ingredient (a.i.): thifensulfuron-methyl and tribenuron-methyl each at 23.1% and metsulfuron-methyl at 4.6%
PMRA Document Number: 3177826

Background

PP-23235 Herbicide is registered for post-emergent control of broadleaf weeds in spring and durum wheat, spring barley, and established creeping red fescue. It is recommended for application alone or in tank mixture with listed herbicides, including Perimeter II, Perimeter II + MCPA Ester, Perimeter II + Axial, or Perimeter II + MCPA Ester + Axial Herbicide. For specific details of uses, application rates and methods, precautions, restrictions, and personal protective equipment requirements, refer to the product label.

Purpose of Application

The purpose of this application is to include a statement indicating that the existing tank mix partner, Perimeter II Herbicide, may be substituted for other equivalent fluroxypyr-based herbicides.

Chemistry, Health, and Environmental Assessments

Chemistry, health, and environmental assessments were not required as there was no change to product chemistry, product formulation, or use pattern.

Value Assessment

Value information submitted for review was in the form of a scientific rationale. The information was previously reviewed under a similar application and considered supportive.

Expansion of the PP-23235 Herbicide label provides growers greater flexibility to choose their preferred brand of fluroxypyr product that is equivalent to Perimeter II Herbicide to be tank mixed with PP-23235 Herbicide.

Conclusion

The PMRA has completed an assessment of the subject application and has found the information sufficient to support the requested registration amendment.
