

Evaluation Report for Category B, Subcategory 3.10 Application

Application Number: 2023-1321
Application: New or Changes to Product Labels-Tank Mixes
Product: Micora Fungicide
Registration Number: 30759
Active ingredient (a. i.): Mandipropamid
PMRA Document Number: 3496334

Background

Micora Fungicide (Reg. No. 30759; Syngenta Canada Inc.) is a commercial suspension fungicide containing the active ingredient mandipropamid (250 g/L).

Purpose of Application

The purpose of this application is to add the general tank mixing statement to the product label and also additional proposed amendments on use directions for greenhouse cucumber and greenhouse pepper.

Chemistry, Health and Environmental Assessment

Chemistry, health, and environmental assessments were not required as there was no change to product chemistry, product formulation, or use pattern.

Value assessment

A thorough review of the label determined that the addition of the general tank mixing statement is acceptable as it is consistent with the requirements in the PMRA Guidance Document – Tank Mix Labelling (March 16, 2023).

The inclusion of the general tank mixing statement on the label allows growers greater flexibility to select tank mixtures to control pests in labelled crops. Flexibility in the selection of tank mix partners may contribute to resistance management practices, integrated pest management programs or the control of a broader range of pests, with an associated cost- and time-savings by the user.

In addition, the removal of redundant label statements was also determined to be acceptable on the basis of improving label clarity.

Conclusion

The Pest Management Regulatory Agency has completed an assessment of the subject application and has found the inclusion of the general tank mixing statement and minor updates to the use instructions on greenhouse cucumber and pepper to be acceptable on the product label.
