

## Evaluation Report for Category C, Subcategory 3.9, 3.11 Applications

**Application Numbers:** 2010-0278  
**Applications:** Category C.3.10  
**Products:** Classic Grande Herbicide  
**Registration Number:** 29416  
**Active ingredients (a.i.):** Chlorimuron-ethyl  
**PMRA Document Number:** 1915810  
**PMRA Document Number:** 1916374

### Background

Classic Grande Herbicide provides early post emergence control of select broad leaved weeds in soybeans, in eastern Canada. For specific details of uses, application rates and methods, precautions, restrictions, and personal protective equipment requirements, refer to the product labels.

### Purpose of Application

The purpose of this application was to amend the registration of Classic Grande Herbicide to allow for the labelling of generic glyphosate salts as tank mix partners, rather than listing specific glyphosate containing end use products.

### Chemistry Assessment

A chemistry assessment was not required as there was no change to product chemistry.

### Health and Environmental Assessments

Health and environmental assessments were not required as there was no change to the product formulation and the only change to the use pattern was an addition of a new pest.

### Value Assessment

A rationale was submitted for review indicating that Classic Herbicide is presently registered for use with 12 glyphosate containing tank mix partners, comprising three different salts of glyphosate (potassium, isopropylamine and diammonium). The rationale also cited other precedents that also support such an amendment.

## **Conclusion**

The Agency has completed an assessment of the subject application and has found the information sufficient to amend the registration of Classic Grande Herbicide to allow for the labelling of generic salts of glyphosate (potassium, isopropylamine and diammonium) on the product label.
