

Evaluation Report for Category B, Subcategory 3.2 Application

Application Number: 2016-8129
Application: Changes to Product Labels - Application Timing
Product: Classic 25 DF Herbicide
Registration Number: 25433
Active ingredient (a.i.): Chlorimuron-ethyl
PMRA Document Number: 2739068

Purpose of Application

The purpose of this application was to amend the registration of Classic 25 DF Herbicide to expand the post-emergent application timing to the cotyledon to 3rd trifoliolate stage from the labelled 1st to 3rd trifoliolate stage.

Chemistry, Health and Environmental Assessments

Chemistry, health and environmental assessments were not required for this application.

Value Assessment

The expansion of the post-emergent application timing for Classic 25 DF Herbicide to include the cotyledon and unifoliolate growth stages provides soybean growers more flexibility to employ this herbicide alone or in tank mix with listed herbicides in the early season.

Value information demonstrated that soybean at the cotyledon and unifoliolate growth stages exhibited a similar margin of tolerance to Classic 25 DF Herbicide when compared to soybean at the labelled 1st to 3rd trifoliolate growth stage. Value information submitted for review included data from replicated field trials conducted in Ontario in 2006 and 2016.

Conclusion

The Pest Management Regulatory Agency has completed an assessment of the information provided, and has found the information sufficient to support the amendment of the registration of Classic 25 DF Herbicide to expand the post-emergent application timing.
