

Evaluation Report for Category B, Subcategory 3.10, 3.11 Application

Application Number: 2020-2002
Application: New or Changes to Product Labels – Tank mixes, new pests
Product: Zolera Fungicide
Registration Number: 32200
Active ingredients (a.i.): Tetraconazole
PMRA Document Number: 3182634

Background

Zolera Fungicide is a broad-spectrum micro emulsion fungicide containing the active ingredient tetraconazole. It is currently registered in Canada for the control or suppression of various fungal diseases on wheat, barley, dried shelled pea and bean (Crop Subgroup 6C), rapeseed/canola (Crop Subgroup 20A), corn and sugar beet.

Purpose of Application

The purpose of this application is to expand the registration of Zolera Fungicide to include the claim of control of scald on barley and the addition of a tank mix with Evito 480 SC Fungicide for the suppression of ascochyta blight on pea, and ascochyta leaf and pod spot on lentil and pea.

Chemistry, Health and Environmental Assessment

A chemistry assessment was not required since there was no change to product chemistry. Health and environment assessments were not required since the use pattern, including host crop, application rates and timings, of the component product remained unchanged.

Value Assessment

A rationale and value information from five field trials conducted in Alberta in 2016 were reviewed to support the use claims. The efficacy results demonstrated that Zolera Fungicide controlled barley scald when applied as proposed in the trials under acceptable levels of disease pressure. The use pattern for scald control is in alignment with the currently registered uses on barley. The registration of this new use will provide Canadian growers with a new active ingredient to manage this important disease on barley. The tank mix use of Zolera Fungicide with Evito 480 SC Fungicide is expected to improve the level of control of ascochyta blight of pea or ascochyta leaf and pod spot of lentil and pea.

Conclusion

The Pest Management Regulatory Agency has completed an assessment of the information provided in support of the product, Zolera Fungicide, and has found the information sufficient to add a claim of control of scald in barley and a tank mix with Evito 480 SC Fungicide in pea and lentil to the product label.
