

## Evaluation Report for Category B, Subcategory 2.3, 2.4, 2.5 Application

**Application Number:** 2020-1344  
**Application:** New Product Chemistry, Identify of Formulants, Proportion of Formulants, Formulation Type  
**Product:** DoubleTap Soft Bait  
**Registration Number:** 34220  
**Active ingredient (a.i.):** Chlorophacinone  
**PMRA Document Number:** 3239279

### Purpose of Application

The purpose of this application was to register DoubleTap Soft Bait, a commercial rodenticide for use in structures, empty food and feed storage areas and various outdoor sites, to control Norway rats, roof rats, house mice, deer mice and white-footed mice.

### Chemistry Assessment

DoubleTap Soft Bait is formulated as a paste containing chlorophacinone at a concentration of 0.005%. This end-use product has a density of 1.111-1.113 g/mL. The required chemistry data for DoubleTap Soft Bait have been provided, reviewed and found to be acceptable.

### Health Assessments

DoubleTap Soft Bait is considered to have an acute toxicity profile equivalent to that of the precedent product. The label conforms to the requirements outlined in Re-evaluation Note REV2010-17, Risk Mitigation Measures for Eight Rodenticides.

Worker exposures to chlorophacinone are not expected to exceed those of registered products. No health risks of concern are expected, provided workers wear the required personal protective equipment and follow all label directions. No health risks of concern are expected for the public.

A dietary exposure assessment was not required for this application.

### Environmental Assessment

DoubleTap Soft Bait poses acceptable environmental risk when used in accordance with label directions.

## **Value Assessment**

Value information reviewed included a scientific rationale to extrapolate product performance from similar registered products based on the product mode of action and similarity between pest species, and laboratory choice trials against three species of rats or mice. This information supported a claim that DoubleTap Soft Bait controls Norway rats, roof rats, house mice, deer mice and white-footed mice indoors and outdoors within 15 metres of buildings (residential, industrial, commercial, agricultural, and public buildings). DoubleTap Soft Bait may also be applied in garbage dumps. This use has value as it expands the pest spectrum of chlorphacinone by killing deer mice and white-footed mice, which are important vectors of diseases such as Hantavirus.

## **Conclusion**

The Pest Management Regulatory Agency has completed an assessment of the available information and has found it sufficient to register DoubleTap Soft Bait.
