

Evaluation Report for Category B, Subcategory 3.10 Application

Application Number: 2023-0783
Application: New or Changes to Product Labels – Tank Mixes
Product: Revus Fungicide
Registration Number: 29074
Active ingredient (a.i.): Mandipropamid
PMRA Document Number: 3468988

Background

Revus Fungicide (Reg. No. 29074; Syngenta Canada Inc.) is a suspension conventional fungicide, containing the active ingredient mandipropamid (250 g/L). It is registered to control or suppress certain fungal diseases on various crops and plants. With the publication of the PMRA Guidance Document: *Tank Mix Labelling* (March 2023), certain actions are required from registrants so that labels are compliant by 20 December 2024, including the removal of statements related to unlabeled tank mixing and, when the option of unspecified tank mixes is intended to be retained in the use of a product, the addition of a general tank mix statement.

Purpose of Application

The purpose of this application was to add the general tank mix statement to the product label, Revus Fungicide, in accordance with the latest PMRA guidance on tank mix labelling.

Chemistry, Health and Environmental Assessment

A chemistry assessment was not required since there was no change to product chemistry. Health and environment assessments were not required since the use pattern remained unchanged.

Value Assessment

The requested changes to the product label have been verified for inconsistencies with PMRA guidance on tank mix labelling and any other incongruities with existing wording. The value of the label amendments was determined to be acceptable. The inclusion of the general tank mixing statement on the label allows growers greater flexibility to select tank mixtures to control pests in labelled crops.

Conclusion

The Pest Management Regulatory Agency has completed an assessment of the subject application and has found the requested label amendments to be acceptable.
