

## Evaluation Report for Category C, Subcategory C.3.11 Application (New or Changes to Pests)

**Application Number:** 2012-1595  
**Application:** Category C, Subcategory C.3.11 (new or changes to the pests)  
**Product:** PP-2525 Herbicide  
**Registration Number:** 29261  
**Active ingredients (a.i.):** 25% tribenuron methyl and 25% thifensulfuron methyl  
**PMRA Document Number:** 2198149

### Background

PP-2525 Herbicide containing 25% tribenuron-methyl and 25% thifensulfuron-methyl is registered for post-emergence control or suppression of certain broadleaved weeds in small grain cereals. For specific details of uses, application rates and methods, precautions, restrictions, and personal protective equipment requirements, refer to the product label.

### Purpose of Application

The applicant has applied to amend the registration of PP-2525 Herbicide to include a control claim for common chickweed.

### Chemistry, Health, and Environmental Assessments

Chemistry, health, and environmental assessments were not required as there was no change to product chemistry, product formulation, and use site and pattern.

### Value Assessment

Data from 4 efficacy trials conducted in Alberta and Manitoba over a two year period were submitted. The application of PP-2525 Herbicide + Agral 90 at the labelled rate provided an acceptable level of common chickweed control in these trials. Therefore, a control claim for common chickweed with the treatment of PP-2525 Herbicide + a non-ionic surfactant is supported from a value standpoint.

### Conclusions

The PMRA has completed an assessment of the subject application and has found the information sufficient to amend the registration of PP-2525 Herbicide to include a control claim for common chickweed.
