

Evaluation Report for Category B, Subcategory 3.5 Application

Application Number: 2013-5753
Application: New or Changes to Product Labels-Rotational Crops\Plant-back Interval
Product: Evito 480 SC Fungicide
Registration Number: 30408
Active ingredients (a.i.): Fluoxastrobin
PMRA Document Number : 2385122

Purpose of Application

The purpose of this application was to amend the plant-back interval (PBI) for canola, flax and sunflower from one year to 180 days for Evito 480 SC Fungicide.

Chemistry Assessment

A chemistry assessment was not required for this application.

Health Assessments

Field accumulation trials conducted in the US were submitted to support the reduction of the PBI for canola, flax and sunflower, on the label of 480 SC Fungicide, from one year to 180 days. Reduction in the PBI is not expected to increase the magnitude of fluoxastrobin residues in/on canola, flax and sunflower planted at a PBI of 180 days. Therefore, no unacceptable risk to any segment of the population, including infants, children, adults and seniors, is anticipated.

Toxicology and occupational exposure assessments were not required for this application.

Environmental Assessment

Canola, flax, and sunflower crops are not currently specifically listed in the Rotation Restrictions section of the label and, therefore, subjected to the default PBI of one year after last field application. The label amendment of a 180 Day PBI for canola, flax and sunflower is not expected to pose additional environmental concerns.

Value Assessment

A value assessment was not required for this application.

Conclusion

The PMRA has completed an assessment of the information provided and is able to support the

amendment to the PBI for Evito 480 SC Fungicide.
