

Evaluation Report for Category B, Subcategory B.3.11 Application (New or Changes to Product Label – New Pests)

Application Number: 2019-3981
Application: Category B.3.11 (New or changes to product label – New pests)
Product: Travallas Herbicide
Registration Number: 31685
Active Ingredient (a.i.): 3 g/L metsulfuron-methyl, 30 g/L thifensulfuron-methyl, and 150 g/L fluroxypyr (present as 1-methylheptyl ester)
PMRA Document Number: 3046613

Background

Travallas Herbicide is registered for selective post-emergent control of broadleaf weeds in wheat (spring, durum, and winter) and spring barley grown in the Prairie Provinces and the Interior of British Columbia. For specific details of uses, application rates and methods, precautions, restrictions, and personal protective equipment requirements, refer to the product label.

Purpose of Application

The purpose of this application is to include a control claim for scentless chamomile up to 10 cm in height on the Travallas Herbicide label.

Chemistry, Health, and Environmental Assessments

Chemistry, health, and environmental assessments were not required as there was no change to product chemistry, product formulation, or use pattern.

Value Assessment

Value information submitted for review consisted of data from replicated field trials, which were conducted in Alberta in 2014 and 2018. This information demonstrated that the application of Travallas Herbicide per the label instructions can be expected to provide acceptable control of scentless chamomile up to 10 cm in height.

Expansion of the weed spectrum on the Travallas Herbicide label provides growers with another option to manage the hard-to-control scentless chamomile in wheat (spring, durum, and winter) and spring barley.

Conclusion

The PMRA has completed an assessment of the subject application and has found the information sufficient to support the requested amendment to the registration of Travallas Herbicide.
