

Evaluation Report for Category B, Subcategory B.3.11 Application

Application Number: 2021-6444
Application: Change to product label – addition of new disease claims
Product: Cevya Fungicide
Registration Number: 33405
Active ingredients (a.i.): Mefentrifluconazole
PMRA Document Number: 3365277

Background

CEVYA Fungicide (Reg. No. 33405) is a broad-spectrum fungicide containing mefentrifluconazole as the active ingredient. Cevya Fungicide is registered for control or suppression of various diseases in several crops, including peanut, potato, sugar beet, Crop Group 11- 09 (Pome Fruits), Crop Group 12-09 (Stone Fruits), grape, and tree nuts. For full details of the registered use pattern, please consult the product label.

Purpose of Application

The purpose of this submission was to add use claims on grape, apple and pear to the Cevya Fungicide label, including black rot on grape, black rot/frogeye leaf spot, flyspeck and sooty blotch on apple, and pear scab on pear.

Chemistry, Health and Environmental Assessment

A chemistry assessment was not required since there was no change to product chemistry. Health and environmental assessments were not required since the use pattern, including host crop, application rates and timings, of the component product remained unchanged.

Value Assessment

A total of 10 field efficacy trials (three grape, four apple, and three pear) conducted in the US between 2014 and 2016 and scientific rationales were submitted for review. The claims were supported based on the submitted evidence.

The registration of Cevya Fungicide for these uses provides growers with a new fungicide active ingredient and additional option for disease control in grape, apple, and pear.

Conclusion

The Pest Management Regulatory Agency has completed an assessment of the value information provided in support of the addition of use claims on grape, apple, and pear to the Cevya Fungicide label.
