

Evaluation Report for Category B, Subcategory 2.1 Application

Application Number: 2014-1285
Application: New End-Use Product Chemistry - Guarantee
Product: Perfect Room Plus Dust
Registration Number: 32179
Active ingredients (a.i.): Silicon dioxide (present as 100% diatomaceous earth - freshwater source)
PMRA Document Number : 2599370

Purpose of Application

The purpose of this submission was to register a new domestic insecticide, Perfect Room Plus Dust, for both indoor and outdoor uses to control ants, bed bugs, cockroaches, crickets, earwigs, fleas, and silverfish.

Chemistry Assessment

Perfect Room Plus Dust is formulated as a dust containing silicon dioxide (present as 100% diatomaceous earth) at 82%. This end-use product has a specific gravity of 2.0 and pH of 6 – 8. The chemistry requirements for this product have been fulfilled.

Health Assessments

Toxicology and food residue assessment were not required for this application.

Available information suggests that Perfect Room Plus Dust is of low acute oral, dermal, and inhalation toxicity, is minimally irritating to the eye, but not to the skin, and is not expected to be a dermal sensitizer. Perfect Room Plus Dust is a respiratory irritant when inhaled. The label advises against inhalation and contact with the eyes as mitigative measures.

There are no formulants of concern present in Perfect Room Plus Dust to the health of humans and pets.

Consumer exposure associated with Perfect Room Plus Dust is characterized as short-term and intermediate in duration and is most likely to occur during application and clean-up of the treated area(s). Individuals should not enter the area being treated or during the subsequent clean-up. Adequate ventilation is required when handling, during application, and clean-up. Risk due to consumer exposure is acceptable when precautionary label statements are observed.

When used in residential settings, Perfect Room Plus Dust should not be applied in the

immediate vicinity of people or pets.

Because Perfect Room Plus Dust is proposed for use outdoors, there is a potential for bystander exposure. The degree of which will depend on the environmental conditions during application, the proximity of the bystanders to the treated area, and the duration of bystander exposure. Risk due to bystander exposure is acceptable when precautionary statements on the label are observed.

Since April 26, 2007, registrants have been required by law to report incidents to the PMRA, including adverse effects to health and the environment. Information on the reporting of incidents can be found on the PMRA website. Incidents were searched and reviewed for the active ingredient silicon dioxide (present as 100% diatomaceous earth) – fresh water fossils. As of November 19, 2015, 55 human and 48 domestic animal incident reports involving silicon dioxide (present as 100% diatomaceous earth) – fresh water fossils have been submitted to the PMRA. All incidents were either minor or moderate in severity. All incidents occurred in Canada and involved domestic class products that are formulated as a dust. In the majority of the incidents, the product had been applied inside or outside the home.

The most frequently reported routes of exposure reported in the human incidents were respiratory or oral, often from the application of the product. Several people also came into contact with an area that had been treated and reported symptoms. The most commonly reported symptoms were respiratory, such as irritated throat.

All domestic animals reported in the incidents were cats or dogs. The majority of the animals experienced gastrointestinal symptoms, such as vomiting. The route of exposure was most often reported as oral.

The incident report data were incorporated into the evaluation of silicon dioxide (present as 100% diatomaceous earth) – fresh water fossils.

Environmental Assessment

Based on the non-toxic mode of action and the limited use pattern of this product, the risk to non-target organisms in the environment is expected to be negligible if used according to label statements.

Value Assessment

Perfect Room Plus Dust contains the active ingredient silicon dioxide (diatomaceous earth) which works as an insecticide by physically abrading the outer cuticle leading to dehydration and death of an insect. Based on laboratory efficacy trials and precedent products, the registration of Perfect Room Plus Dust from a value perspective is supported.

Conclusion

The Pest Management Regulatory Agency has completed an assessment of the information provided and has found the information sufficient to support registration of Perfect Room Plus Dust
