

Evaluation Report for Category B, Subcategory B.3.10 Application (New or Changes to Product Label – Tank Mixes)

Application Number: 2023-3837
Application: Category B.3.10 (New or changes to product label – Tank mixes)
Product: Halex GT Herbicide
Registration Number: 29341
Active Ingredient (a.i.): 250 g/L glyphosate present as the potassium salt, 250 g/L s-metolachlor and R-enantiomer, and 25 g/L mesotrione
PMRA Document Number: 3532995

Purpose of Application

The purpose of this application is to amend the registration of Halex GT Herbicide to (1) include the general tank mix statement as per the published PMRA Guidance Document – Tank Mix Labelling and (2) make several label improvements based on the precedents.

Chemistry, Health, and Environmental Assessments

Chemistry, health, and environmental assessments were not required as there was no change to product chemistry, product formulation, or use pattern.

Value Assessment

A thorough review of the label determined that the addition of the general tank mix statement is acceptable as it is consistent with the requirements in the PMRA Guidance Document – Tank Mix Labelling.

The inclusion of the general tank mixing statement on the label allows growers greater flexibility to select tank mixtures to control pests in labelled crops. Flexibility in the selection of tank mix partners may contribute to resistance management practices, integrated weed management programs or the control of a broader range of pests, with an associated cost- and time-savings by the user.

Other label amendments, including the addition of additional tank mixing statements, removal of a precautionary statement, and amendment to the mixing instruction were supported based on rationales and precedent registrations.

Conclusion

The PMRA has completed an assessment of the subject application and has found the information sufficient to support the requested label amendments.
