

Evaluation Report for Category B, Subcategory B.3.11 Application (New or Changes to Product Label – New Pests)

Application Number: 2015-1130
Application: Category B.3.11 (New or changes to product label – New pests)
Product: Travallas Herbicide
Registration Number: 31685
Active ingredients (a.i.): 3 g/L metsulfuron-methyl, 30 g/L thifensulfuron-methyl, and 150 g/L fluroxypyr
PMRA Document Number : 2529819

Background

Travallas Herbicide is registered in the Prairie Provinces and the Peace River Region of British Columbia for selective post-emergent control or suppression of broadleaf weeds in spring wheat (including durum) and spring barley. For specific details of uses, application rates and methods, precautions, restrictions, and personal protective equipment requirements, refer to the product label.

Purpose of Application

The purpose of this application was to amend the registration of Travallas Herbicide to include claims of control of white cockle and stork's-bill.

Chemistry, Health, and Environmental Assessments

Chemistry, health, and environmental assessments were not required as there was no change to product chemistry, product formulation, or use pattern.

Value Assessment

The requested label expansion would provide farmers another option to manage white cockle and stork's-bill, two important weeds in western Canada. Value information, which included data from seven field trials (5 trials on spring wheat and 2 trials on fallow land) in Alberta in 2013 and 2014, demonstrated that Travallas Herbicide at the labeled rate of 91.5 g a.i./ha provided acceptable control of stork's-bill and white cockle.

Conclusion

The PMRA has completed an assessment of the subject application and has found the information sufficient to amend the registration of Travallas Herbicide to include the requested new pest claims.
