

New Pest Evaluation Report for Category B, Subcategory 3.11 Application

Application Number: 2020-2344
Application: New Pest
Product: Cormoran
Registration Number: 33353
Active ingredients (a.i.): Acetamiprid & Novaluron
PMRA Document Number: 3167261

Background

Cormoran is an emulsifiable concentrate product containing acetamiprid (80 g/L) and novaluron (100 g/L) registered to manage certain pests on a variety of crops, including bushberries (crop subgroup 13-07B).

Purpose of Application

The purpose of this submission was to add a claim of control of spotted-wing drosophila on bushberries (crop subgroup 13-07B) to the label of Cormoran.

Chemistry Assessment

A chemistry assessment was not required because there was no change to product chemistry.

Health and Environmental Assessments

Health and environmental assessments were not required because the use pattern, including application rate and application method, of the product remained unchanged.

Value Assessment

The results of five efficacy trials submitted by the applicant, as well as use history information in the form of extension recommendations, supported the claim of control of spotted-wing drosophila on bushberries (crop subgroup 13-07B) with Cormoran applied at 1400 mL product/ha. The addition of this claim to the label of Cormoran will provide bushberry growers with an alternative mode of action to control spotted-wing drosophila.

Conclusion

The PMRA has completed an assessment of the subject application and has concluded that the submitted value information is adequate to support the following claim for Cormoran:

The control of spotted-wing drosophila on bushberries (crop subgroup 13-07B) at 1400 mL product/ha.
