

Evaluation Report for Category B, Subcategory 3.10 Application

Application Number: 2023-3109
Application: Category B.3.10 (New or Changes to Product Labels, B.3.10 – Tank Mixes)
Product: Acramite 50 WS Miticide
Registration Number: 27925
Active ingredient(s) (a.i.): Bifenazate (BFZ)
PMRA Document Number: 3520489

Background

Acramite 50 WS Miticide (Reg. No. 27925; UPL AgroSolutions Canada Inc. (UPI)) is a wettable powder miticide containing 50% bifenazate for the control of mites in apples, grapes, fruiting vegetables, cucurbits, hops, stone fruit, caneberries, tree nuts, seed production on grass and non-grass crops, and herbs. For specific details of uses, application rates and methods, precautions, restrictions and personal protective equipment requirements, refer to the product label.

Purpose of Application

The purpose of the subject application is to add:

1. a general tank mixing statement; and
2. a specific tank mix partner statement for post-emergent use of the fertilizer additives Ohm and Wave to the product label.

Chemistry, Health, and Environmental Assessment

Chemistry, health, and environmental assessments were not required as there was no change to product chemistry, product formulation, or use pattern.

Value Assessment

The applicant, UPL AgroSolutions Canada Inc., elected to exclude the general tank mix statement from the Acramite 50 WS label.

A thorough review of the label and rationale submitted for a precedent product registration, determined that the addition of the specific tank mix partner statement is acceptable as it is consistent with the requirements in the PMRA Guidance Document – Tank Mix Labelling (March 16, 2023).

Conclusion

The Pest Management Regulatory Agency has completed an assessment of the subject application and has found the inclusion of the tank mixing statement with Ohm and Wave supplement products to be acceptable on the product label.
