

Evaluation Report for Category B, Subcategory 3.13 Application

Application Number: 2016-5586
Application: Changes to Product Labels-Precautions
Product: Stress Shield 600
Registration Number: 30668
Active ingredients (a.i.): Imidacloprid
PMRA Document Number: 2783306

Background

When initially registered, this end-use product label originally included a statement on the best management practice which recommended that treated seeds not be carried-over to the next use season. It is important to note that the recommendation was not associated with health or environmental safety concerns of carry over seed.

Purpose of Application

The purpose of this application was to remove the label statement "Carry-over of seed treated with Stress Shield 600 is not recommended".

Chemistry, Health, Environmental Assessments

Chemistry, health and environmental assessments were not required for this application.

Value Assessment

A rationale was provided that outlined reasons why the statement could be removed from the label. The rationale described the original intent of the statement, referred to trials where there was no difference in germination between recently treated and carry-over seed, history of use in other jurisdictions with no carry-over statement, and identified existing label statements that provide sufficient guidance to the user. Moreover, other existing statements on the label provide adequate precautions for the user regarding seed quality and carry-over of treated seed, consistent with good agronomic practice. As such, there were no value concerns with removing the statement from the label.

Conclusion

The Pest Management Regulatory Agency has completed an assessment of the information provided in support of the label amendment, and has found the information sufficient to remove the statement "Carry-over of seed treated with Stress Shield 600 is not recommended" from the product label.
