### **USE LIMITATIONS:**

Bait **MUST** be placed either in tamper-resistant bait stations or in locations not accessible to children, pets, livestock or non-target wildlife. **DO NOT** place bait in areas where there is a possibility of contaminating food or surfaces that come in direct contact with food.

Bait applied outdoors and above-ground **MUST** be placed in bait stations.

Bait stations (**tier 1**) used outdoors, above-ground, in locations accessible to children, pets and non-target wildlife must have the following characteristic, in addition to those outlined above for tier 2 and 3 bait stations: (1) be resistant to destruction or weakening by elements of typical non-catastrophic weather (such as, snow, rain, extremes of temperature and humidity, direct sunshine, etc.).

Bait stations (**tier 2**) used for the placement of rodenticide bait indoors, in locations accessible to pets or livestock must have the following characteristics, in addition to those outlined above for tier 3 bait stations: (1) resistant to destruction by non-target animals; and (2) have an entrance designed so that non-target animals cannot reach the bait.

Bait stations (**tier 3**) used for the placement of rodenticide bait indoors, in locations not accessible to pets or livestock must have the following characteristics: (1) be constructed of high-strength material (e.g., metal or injection moulded plastic) and resistant to destruction by children; (2) have an entrance designed so that children cannot reach the bait; (3) have an internal structure that prevents bait from being shaken loose; (4) have an access panel that fastens securely and locks (e.g., metal screw or padlock); and (5) bear the product name, active ingredient, guarantee, registration number, "WARNING POISON", and the skull and crossbones symbol.

**DIRECTIONS FOR USE:** Indoors and outdoors within 15 metres of buildings.

Rodenticide bait can be placed in tamper-resistant bait stations along the fence line of properties, outside of the 15-metre limit but within a 100 metres of buildings, if the station is securely fastened (e.g., nailed down) to the fence or the ground. Users should remove clothing immediately if pesticide gets inside. Then wash skin thoroughly and put on clean clothing. **Selection of treatment areas:** Place bait in locations where rats and mice travel and will most likely find and consume the bait. Placement along walls, in corners, by gnawed openings, in and around burrows, and in concealed locations where rats and mice feed is desirable. Maintain a steady supply of fresh bait. Remove any spoiled or contaminated bait promptly.

### **Food Processing, Food Manufacturing, Food Storage and Food Service Areas:**

For areas not directly related to food processing: Use only in non-food or non-feed areas where feed, food, packaging and handling equipment are **NEVER** opened or exposed. For areas where feed or food is processed, served or stored: In meat and food processing plants (processing areas) use only when plant is not in operation. Remove or cover all

food, packaging material and utensils before placing bait in baiting stations. Remove all baits and dead rodents before reuse of the plant (processing areas include storage and service).

**Application Directions: Recommendations for Norway rats (*Rattus norvegicus*)** - Norway rats usually inhabit the ground floor of structures and burrow in the ground. They will range approximately 15 to 100 metres from their nesting area seeking food and water. Eliminate as much of the naturally occurring food as possible and place 3 to 16 pieces of Wilson Bromone® Bait-Bites (usually at intervals of 5 to 10 metres) per placement. Maintain an uninterrupted supply of fresh bait for 10 days or until signs of rat activity cease.

**Recommendations for Roof rats (*Rattus rattus*)** - Roof rats are excellent climbers and usually infest the upper stories of structures. Pay special attention to the rats' ability to climb, placing baits in the roof rats activity area. Eliminate as much of the naturally occurring food as possible and place 3 to 16 pieces of Wilson Bromone® Bait-Bites (usually at intervals of 5 to 10 metres) per placement. Maintain an uninterrupted supply of fresh bait for 10 days or until signs of rat activity cease.

**Recommendations for House Mice (*Mus musculus*)** - House mice are excellent climbers and will infest all floors in a structure. Mice will only range approximately 10 metres from their nesting area seeking food. Eliminate as much of the naturally occurring food as possible and place 1 piece of Wilson Bromone® Bait-Bites at intervals of 2 to 4 metres per placement. If a bait placement is not disturbed after several days, move the placement approximately 1 metre. Two pieces of Wilson Bromone® Bait-Bites per placement may be needed at points of very high mouse activity. Maintain an uninterrupted supply of fresh bait for 15 days or until signs of mouse activity cease.

**PRECAUTIONS: KEEP OUT OF REACH OF CHILDREN, PETS AND LIVESTOCK.** May be harmful or fatal if swallowed or absorbed through the skin. All handlers must wear long-sleeved shirt and long pants, shoes plus socks, and chemical-resistant gloves when handling this product. Chemical-resistant gloves must be worn when handling product and when disposing of dead rodents, unconsumed bait and empty containers. Avoid contact with eyes, skin or clothing. Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet. Wash skin thoroughly with soap and water after handling. Wash contaminated clothing, separately from other laundry, with soap and hot water before reuse. **KEEP AWAY FROM FEED AND FOODSTUFFS.** This product is toxic to fish and wildlife. Keep out of lakes, streams and ponds.

**FIRST AID:** If in eyes, hold eye open and rinse slowly and gently with water for 15–20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control centre or doctor for treatment advice. If on skin or clothing, take off contaminated clothing. Rinse skin immediately with plenty of water for 15–20 minutes. Call a poison control centre or doctor for treatment advice. If swallowed, call a poison control centre or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a poison

control centre or doctor. Do not give anything by mouth to an unconscious person. For all cases of human ingestion, immediately notify a physician or poison control centre. If pet or livestock poisoning is suspected, immediately contact a veterinarian. Take container, label or product name and Pest Control Product Registration Number with you when seeking medical attention.

**TOXICOLOGICAL INFORMATION:** If swallowed by humans, domestic animals or pets, this material may reduce the clotting ability of the blood and cause bleeding. Vitamin K<sub>1</sub> in the form of intramuscular or subcutaneous injections or by oral ingestion are suggested remedial treatments for anticoagulant poisoning. The severity of the case, measured by establishing prolonged prothrombin times (P.T.) will determine appropriate therapy. Monitoring P.T. will indicate the necessity of repeated treatments.

**STORAGE:**

Store in a cool, dry place away from other chemicals and food or feed. Store product not in use, in original container, in a secure location inaccessible to children and non-target animals.

**DISPOSAL:** Do not reuse empty container. Dispose of unused or spoiled bait in accordance with local requirements. Follow provincial instructions for any required cleaning of the container prior to its disposal. Make the empty container unsuitable for further use. Dispose of the container in accordance with provincial requirements. For information on the disposal of unused unwanted product contact the manufacturer or the provincial regulatory agency. Contact the manufacturer and the provincial regulatory agency in case of a spill and for the clean-up of spills.

**RODENT DISPOSAL:** Dispose of dead rodents in garbage or by burying.

**NOTICE TO USER :** This pest control product is to be used only in accordance with the directions on the label. It is an offence under the *Pest Control Products Act* to use this product in a way that is inconsistent with the directions on the label. The user assumes the risk to persons or property that arises from any such use of this product.
