DIRECTIONS FOR USE

GENERAL DIRECTIONS:

Place baits in locations where rats and mice feed, water and/or travel. Bait placements along walls, in corners and in concealed locations where rats and mice can feed unobserved are desirable. Contaminated or spoiled baits should be replaced promptly. Protect bait against access of children, pets, livestock and wildlife, preferably using bait stations or tamper proof boxes.

Tablespoon amounts (10-15 g) of bait at 3 to 4 metre intervals. An uninterrupted supply of bait should be maintained for at least 15 days.

KEEP AWAY FROM FOODSTUFFS

PRECAUTIONS:

Harmful if swallowed.

This product can be absorbed through skin, so it should be handled with gloves. Keep away from humans, domestic animals and pets.

This product is toxic to wildlife. The use of anticoagulant formulations can present a significant hazard to predatory mammals and birds through secondary poisoning.

Do not contaminate water by cleaning equipment or disposal of waste.

Do not re-use empty container. Destroy it by perforating or crushing. Bury or discard in a safe place away from water supplies.

FIRST AID INSTRUCTIONS: Do not get in eyes, on skin, or on clothing. In case of contact, flush with water for 15 minutes. If swallowed, give patients 1 to 2 glasses of water and induce vomiting by touching back of throat with finger. Do not induce vomiting or give anything by mouth to an unconscious person. Call a physician immediately.

TOXICOLOGICAL INFORMATION: If swallowed by humans, domestic animals, or pets, this material may reduce the clotting ability of blood and cause bleeding. In case of ingestion, intravenous and oral administration of Vitamin K1 combined with blood transfusions are indicated as in the case of hemorrhage caused by overdoses of bishydroxycoumarin. Call a physician immediately.

NOTICE TO USER: This control product is to be used only in accordance with the directions on this label. It is an offence under the Pest Control Products Act to use a control product under unsafe conditions.

ONLY ROZOL BAITs ARE OIL IMPREGNATED

To ensure the most effective and highest quality bait this product is prepared in a two step operation.

- 1) The active ingredient is dissolved in oil to form an oil concentrate.
- 2) The bait is impregnated with this oil concentrate to penetrate the grain completely with the toxic material.

THIS PROCESS PROVIDES THE FOLLOWING ADVANTAGES:

- a) The lethal action begins when the rodent consumes the bait. The oil impregnation reduces the possibility of the toxic material to detach from bait.

- b) The oil helps in preservation of the bait even under humid conditions. This reduces the possibility of rancidity that may cause bait rejection.
